- 3 Penalties Scope 26
 - 3.1 Instructions subject to cash penalties – General Scope 26
 - 3.2 Instructions subject to cash penalties - Cross-CSD Settlement Scope 27
 - 3.3 Instruments subject to penalties..... 27
- 4 Identification of the party to be penalised 29
 - 4.1 Late Matching Fail Penalty (LMFP)..... 29
 - 4.1.1 LMFP special case: ‘already matched’ instructions 29
 - 4.2 Settlement fail penalty (SEFP)..... 30
- 5 Reference data required for penalty calculations 31

5.1	List of instruments subject to penalties.....	31
5.2	Daily reference price	31
5.3	Instrument type.....	35
5.4	Instrument liquidity/ illiquidity classification	36
5.5	Instrument trading segment ‘SME Growth Market’ - Place of Trading information.....	38
5.6	Instrument category penalty rate	40
5.7	Central Bank Discount rate (penalties due to lack of cash).....	41
5.8	Foreign Exchange Rates (FX).....	42
6	Penalties Currencies Conversions Needs	43
7	Calculation methods of the cash penalties	45
7.1	Settlement fail penalty (SEFP).....	46
7.2	Late matching fail penalty (LMFP)	48
7.2.1	Number of days considered in the computation of LMFP	49
7.2.2	Formulas to be used.....	50
7.3	Daily bilateral net per counterparty	51
7.4	Monthly cash penalties aggregation and global net amounts	52
7.4.1	Monthly bilateral net per counterparty	52
7.4.2	Global Net (monthly amount to be paid or to be received)	53
8	Changes to previously calculated penalties.....	54
8.1	Removal of existing penalties	54
8.2	Re-inclusion of a previously removed penalty.....	55
8.3	Re-allocation of an existing penalty	55
8.4	Update of existing penalties.....	56
9	Cross-CSD settlement fails	57
9.1	Background.....	57
9.2	Scenario 1A.....	58
9.3	Scenario 1B.....	59
9.4	Scenario 1C.....	60
9.5	Scenario 2A	60
9.6	Scenario 2B	61
9.7	Scenario 2C	62
9.8	Scenario 2D	62
9.9	Scenario 2E.....	63

9.10	Scenario 2F.....	64
9.11	Scenario 2X (new)	64
9.12	Scenario Bridge	65
10	Collection & Redistribution of Penalties (Payment).....	66
10.1	General overview.....	66
10.1.1	T2S-In CSDs payments processing.....	67
10.2	Step 1: Penalties Collection From CSD Participants.....	69
10.2.1	Payment via direct debits and/ or cash transfers	70
10.2.2	Payment via PFOD transactions	70
10.2.3	Payment via a payment bank.....	71
10.3	Step 2: Penalties Redistribution From Penalties Receiving CSD To Its Participants.....	71
10.3.1	Cash transfers	71
10.3.2	Payment via PFOD transactions	71
10.3.3	Payment via a payment bank.....	71
11	Reporting.....	72
11.1	Reporting formats.....	72
11.1.1	ISO20022 messages.....	73
11.1.2	ISO15022 messages	73
11.1.3	Alternative reporting solutions	74
11.2	Generic Reporting content	74
11.2.1	Information blocks for penalty reporting.....	74
11.2.2	Mandatory fields	75
11.3	Message types.....	76
11.3.1	Daily penalties report.....	76
11.3.2	Monthly aggregated report.....	77
11.3.3	Payment pre-advices	77
12	Miscellaneous	79
12.1	Penalties Activation process.....	79
12.2	Contingency And Exceptions Handling.....	79
12.2.1	Delayed delivery of CSD reports.....	79
12.2.2	Exceptional situations where the cash penalties should not be applied	79
12.2.3	CSD participant insolvency	80
12.2.4	CSD participant late or non-payment (excluding insolvency) - DRAFT	81

12.3	CCP Related Aspects	82
12.3.1	Main principles to be applied as agreed between EACH and ECSDA	82
12.3.2	Transactions scope.....	83
12.3.3	T2S settlement fails	83
12.3.4	Non-T2S settlement fails	83
12.3.5	Penalties calculation and reporting on cleared transactions by the CSDs.....	84
12.3.6	Penalties collection & re-distribution on cleared transactions by CCPs.....	85
Annexes	86
Annex I- T2S documents	86
Annex II - Other documents and references	86
Annex III - Settlement penalties scenarios (excluding scenario 2X)	87
Annex IV - List of CSDs using the Framework as market practice	88
Annex V – Penalties activation process examples (see Framework chapter 12.1)	89
Annex VI – Penalties amounts reporting – Illustrative examples	91
Annex VII – ECSDA Penalties Reference Data Rules & Recommendations	104

GLOSSARY

Acronym or abbreviation	Description
BD	<p>Business day(s); see also ‘PBD’ (Penalties Business Day)</p> <p>Settlement: Business days are those days on which an instruction can settle in the CSD (and in the relevant payment system in case of settlement versus payment); such ‘opening days’ are excluding, for instance, week-ends.</p> <p>Note: regarding Penalties reference data: regarding the publication of the ESMA databases used for penalties reference date, BDs can influence the eligibility for the penalties period of a security (see Framework Annex VII, Rules RE16 ‘Rule for the validity of reports published on days that are not business days’, RE18 ‘Rule for processing ESMA DB validity dates when setting up penalties’ eligibility’ and RE20 ‘Rule for assessing the Availability date of FITRS/Equities files’).</p>
CA	Competent Authority(ies); relevant supervisor(s)/ regulator(s) of the CSD
Calculating-CSD	<p>CSD subject to CSDR where the actual settlement (fail) is taking place; the Calculating-CSD will calculate, report and collect/ distribute penalties to its participants (that may as well be CSDs); also in cross-CSD settlement fails scenarios involving direct links, to avoid duplication of penalties calculation and reconciliation issues between linked CSDs, penalties shall exclusively be calculated by the Calculating-CSD.</p> <p>Note for T2S: regardless of the (Investor- or Issuer-) CSD role for the financial instruments of the transactions subject to penalties in T2S and due to the absence of a ‘Calculating CSD’, it is the T2S platform that centrally calculates and reports to each T2S CSD (and counterparty CSD in case of cross-CSD fails) the penalties involving its and the counterparty CSDs’ participants. For T2S cross-CSD penalties the collection & redistribution is performed separately for each ‘pair’ of involved T2S CSDs (i.e. the penalties amounts for fails between CSD A and CSD B are not commingled with the fails between CSD A and CSD C).</p>
CCP	Central Counterparty
CSD	Central Securities Depository
CSDR	Regulation (EU) no 909/2014 of the European Parliament and of the Council of 23 July 2014 on improving securities settlement in the European Union and on central securities depositories and amending Directives 98/26/EC and 2014/65/EU and Regulation (EU) No 236/2012 (‘EU CSD-Regulation’). Note that CSDR applies to both, CSDs and International Central Securities

Acronym or abbreviation	Description
	<p>Depositories (ICSDs, i.e. Clearstream Banking Luxembourg or Euroclear Bank).</p> <p>See https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX%3A32014R0909</p> <p>for the full package of related texts including standards and guidelines, see https://www.esma.europa.eu/regulation/post-trading/settlement</p>
DR	<p>EU Delegated Regulation. In the Framework, and unless specified otherwise, DR relates to penalty reference prices and applicable rates. See http://eur-lex.europa.eu/eli/reg_del/2017/389/oj</p>
ECB	<p>European Central Bank</p>
ESMA	<p>European Securities and Markets Authority</p>
Global Net amount	<p>Represents the penalties ‘net’ (i.e. the gross amount to be received minus the gross amount to be paid) cash amount to be paid or to be received by each party for each currency and ‘actual place of settlement’ (CSD-link or settlement platform).</p> <p>Different scenarios apply:</p> <ul style="list-style-type: none"> - Intra-CSD penalties: the CSD corresponds to the ‘actual place of settlement’ and calculates a sole global net amount for each participant and currency. - Cross-CSD penalties – T2S: <ul style="list-style-type: none"> For the T2S settlement platform being the ‘actual place of settlement’, one global net amount is calculated per party, currency, and every counterparty CSD (i.e. separate global net amounts for each cross-CSD penalties payment). - Cross-CSD penalties – non-T2S: <ul style="list-style-type: none"> The Calculating-CSD being the ‘actual place of settlement’ calculates a sole global net amount per participant (including Investor-CSDs) and currency, i.e. the same approach as for ‘Intra-CSD penalties’ applies. Therefore, in the case of an Investor -CSD with bilateral links to e.g. two Issuer-CSDs, each Issuer-CSD calculates a separate global net amount towards the CSD participating in its system (i.e. the Investor-CSD). As a result, the Investor-CSD may report and process separate global net amounts per CSD-link towards its participants.
ISD	<p>Intended Settlement Date date on which the settlement instruction shall settle (same meaning as ‘Requested Settlement Date (RSD)’)</p>

Acronym or abbreviation	Description
LMFP	Late matching Fail Penalty; penalty that applies due to the matching taking place <u>after</u> the ISD. See also 'SEFP'.
MiFID II/ MiFIR	<p>Markets in Financial Instrument Directive II; Directive 2014/65/EU of the European Parliament and of the Council of 15 May 2014</p> <p>http://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:32014L0065&from=EN</p> <p>Markets in Financial Instrument Regulation; Regulation (EU) No 600/2014 of the European Parliament and of the Council of 15 May 2014</p> <p>http://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:32014R0600&from=en</p>
Partial redistribution	<p>Redistribution of cash penalties by a CSD to receiving participants or CSDs even when not all dues have been fully collected by the paying CSD on the 17th Penalties Business Day (PBD).</p> <p>'Partial redistribution' may be applied, e.g. to limit cash balances on a CSD's own penalties cash account (including to comply with local regulations) or contingency situations. Pre-condition is that the full amount expected to be received by a single CSD or CSD participant can be paid (i.e. no 'partial payments' apply; see also 'Partial payment').</p>
Partial payment	<p>Payment of only a portion of the full amount expected to be received by a single CSD or CSD participant; 'partial payments' shall not be applied for any penalties payments unless required in contingency or other exceptions handling (e.g. insolvency) situations.</p> <p>See also 'Partial redistribution'.</p>
Party	<p>A 'party' may be defined by a CSD either by:</p> <ul style="list-style-type: none"> - BIC (approach applied by the T2S platform, i.e. T2S CSDs will use the 'T2S Party BIC' to define the 'party', i.e. the 'party 1' from an ISO standard perspective); or - CSD participant securities account number; or - LEI. <p>The CSD-role under national law and domestic market models or settlement platforms (e.g. T2S) have to be considered as well in this respect. Hence, the usage of harmonised definitions across all CSDs is not achievable.</p>

Acronym or abbreviation	Description
PBD	<p>‘Penalties Business Day’; to be used for the penalties-specific monthly reporting, appeals, and payment processing by a CSD.</p> <p>For the monthly reporting and, appeals, this is any day of the year except for 01st January and 25th December and Saturdays, Sundays.</p> <p>For example, if the 14th Penalties Business Day is not a Business Day at a CSD, the monthly report shall be still sent on or prior to the 14th Penalties Business Day.</p> <p>The term was introduced in the Framework in March 2020 at the request of CSD customers in order to ensure a consistent counting of days across CSDs and to limit differences in the penalties lifecycle across multiple CSDs.</p>
RTS	Regulatory Technical Standard, which is endorsed by the European Commission by means of a delegated act supplementing an EU Regulation or a Directive
SDR	<p>CSDR Settlement Discipline Regime; amongst others, prescribing CSD settlement functionalities, measures to prevent settlement fails (incl. penalties, mandatory buy-ins and sanctions to participants), and reporting to be provided. The standards describing the regime in detail can be found here:</p> <p>https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=uriserv:OJ.L_.2018.230.01.0001.01.ENG&toc=OJ:L:2018:230:TOC</p>
SEFP	Settlement Fail Penalty; penalty that applies due to the non-settlement of a matched transaction on or after its ISD
SFD	<p>EU Settlement Finality Directive; Directive 98/26/EC of the European Parliament and of the Council of 19 May 1998 on settlement finality in payment and securities settlement systems</p> <p>http://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=OJ:L:1998:166:0045:0050:EN:PDF</p>
SMPG	SWIFT Securities Market Practice Group
SSR	<p>Short Selling Regulation; Regulation (EU) No 236/2012 of the European Parliament and of the Council of 14 March 2012</p> <p>http://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:32012R0236&from=EN</p>

Acronym or abbreviation	Description
T2S	Target 2 Securities; European Central Bank (ECB) centralised settlement platform
T2S CSDR TF	Task Force composed of representatives from ECB, Central Banks, CSDs, ECSDA and the Banking community to discuss requirements towards and solutions of T2S related to CSDR

INTRODUCTION

On 23 July 2014, the European Parliament and the Council have issued Regulation (EU) No 909/2014 (later, CSDR¹) aiming at the harmonisation of the regulatory environment of securities settlement and Central Securities Depositories in the European Union.

On 13 September 2018, the European Commission officially published Delegated Regulation (DR) 2018/1229, supplementing Regulation (EU) No 909/2014 of the European Parliament and of the Council with regard to regulatory technical standards (RTS) on the Settlement Discipline Regime (later, SDR)².

The introduction to the DR states:

“One of the main objectives of the Regulation is to improve the safety and efficiency of securities settlement, in particular for cross-border transactions, by ensuring that buyers and sellers receive their securities and money on time and without risks. To achieve this objective, the Regulation harmonises the timing and framework for securities settlement in the Union. In particular, it provides for a set of measures to prevent and address failures in the settlement of securities transactions (‘settlement fails’), commonly referred to as settlement discipline measures.”

This ECSDA CSDR Settlement Fails Penalties Framework (later, ‘the Framework’) is the effort of compliance with the Regulation and harmonisation of settlement penalties mechanisms across CSDs subject to CSDR or regulation alike and constitutes a **market practice** for the CSDs mentioned in Annex IV of the Framework.³

The Framework solely focuses on the settlement fails penalties-related aspects of the CSDR settlement discipline regime.

European CSDs also take into account the regulatory and contextual elements as described below and having led the CSDs to develop the present Framework:

- (i.) The Framework recognises the importance of the provisions of CSDR Articles 6 & 7 (with regard to measures to prevent and to address settlement fails), as well as Delegated Regulation 2018/1229 detailing the Settlement Discipline Regime. The provisions aim at increasing settlement efficiency and harmonising settlement discipline measures across the Union through the following four key pillars:

Pillar I. Measures to prevent settlement fails:

¹ Regulation (EU) No 909/2014 of the European Parliament and of the Council of 23 July 2014 on improving securities settlement in the European Union and on central securities depositories and amending Directive 98/26/EC and 2014/65/EU and Regulation (EU) No 236/2012 (OJ L 257, 28.8.2014, p. 1). The Regulation and delegated acts can be found here: <https://www.esma.europa.eu/regulation/post-trading/settlement>

² Full text can be found here: <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=celex:32018R1229>

³ The CSDs involved in drafting of the Framework include members of ECSDA subject to the CSDR or aiming at compliance with equivalent legislation, as well as NBB-SSS (the National Bank of Belgium Securities Settlement System) and BOGS (the Bank of Greece Securities Settlement System). The full list of CSDs using the Framework as a market practices can be found in Annex IV.

- Trade allocations and confirmations (obligation for Investment Firms, not applicable to CSDs);
- Automation of CSDs' settlement processes and reporting of 'manual interventions';
- Settlement instructions mandatory matching fields;
- CSDs' settlement functionalities aiming at preventing settlement fails (e.g. bilateral cancellation, hold & release, partial settlement) and possible derogation from the requirements to offer partial settlement and hold & release functionalities by CSDs under certain conditions.

Pillar II. Requirements to monitor and report settlement fails:

- CSDs are required to monitor and analyse settlement fails and CSD participants' settlement efficiency, including setting up working groups to define measures to improve efficiency;
- Settlement efficiency/ fails reporting to authorities, CCPs/ Trading Venues, and the public.

Pillar III. Requirements for CSDs to charge cash penalties to users that cause settlement fails (the sole subject of this ECSDA Penalties Framework):

- For matched settlement instructions failing to settle on the Intended Settlement Date (ISD), daily calculation, (at least) monthly collection, distribution, and reporting of penalties to CSD participants are required to be applied by CSDs subject to CSDR or alike regulation.

Pillar IV. Rules requiring a mandatory buy-in:

- Receiving trading parties and CCPs are required to initiate a mandatory buy-in after a specific period after the ISD (the CSD role is limited to information gathering and regulatory reporting).

(ii.) In May 2020, the EU Commission Delegated regulation 2020/1212⁴ amended the date of entry into force of the CSDR SDR RTS to 01st February 2021⁵. However, a further delay until 01st February 2022 was adopted by another EU Commission delegated regulation issued on 23.10.2020⁶.

(iii.) Any relevant additional clarification (once officially published) by the European Authorities will be taken into account in the Framework.

⁴ <https://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:32020R1212&from=EN>

⁵ <https://www.esma.europa.eu/press-news/esma-news/esma-proposes-amend-technical-standards-in-view-postponing-entry-force-csdr>

⁶ <https://ec.europa.eu/transparency/regdoc/rep/3/2020/EN/C-2020-7186-F1-EN-MAIN-PART-1.PDF>

- (iv.) Settlement penalties are applicable to CSD participants, including CSDs when these have established a CSD-link with a CSD applying CSDR SDR penalties.
- (v.) The parameters and penalty rates for the calculation of cash penalties for settlement fails have been adopted and officially published in March 2017 ('Cash Penalties Calculation Delegated Act').
- (vi.) T2S CSDs and the Eurosystem (via the 'T2S CDR Task Force') jointly identified the necessary changes to the T2S platform and to facilitate T2S CSDs' compliance with CSDR.

As a result, the following documents were created (see Annexes I and II for details):

- T2S penalty mechanism document and subsequent specifications in the T2S Change Request 654;
- Penalty lists – Messages overview (ISO20022 format, only; transposition into ISO15022 messages is ongoing by SWIFT); and
- List of clarifications sent to ESMA (note that an additional list of items requiring clarifications has been submitted by ECSDA to ESMA).

Please note that several penalties-related elements mentioned in this Framework have been explicitly excluded from the T2S CSDR Task Force discussions and the documents resulting from it, such as:

- i. Agreement on the list of financial instruments subject to penalties and sourcing of a 'golden data feed' for the cash penalties calculation;
- ii. Collection and redistribution of cash penalties (i.e. the actual payment of cash penalties); and
- iii. Reporting and messaging from CSDs to their participants and between CSDs.

1 ECSDA CSDR PENALTIES FRAMEWORK - KEY CONSIDERATIONS

1. The ECSDA Framework (market practice) applies to all CSDs subject to the EU CSDR (text with EEA relevance) or alike regulation⁷. The list of CSDs that adopts the Framework can be found in the Annex to the Framework⁸. In case a CSD does not comply with the Framework in a specific aspect (due to e.g. legislative or operational boundaries), it will provide the relevant information to ECSDA and its participants accordingly.
2. The Framework aims at ensuring that all CSDs implement the provisions in a harmonised way, neutral of whether settlement takes place in or outside of T2S, and neutral to the systems that are used by CSDs to process settlement fails penalties.
3. The CSDR penalties mechanism will be set up by all CSDs subject to CSDR. If a CSD already applies a penalties regime, this shall be adapted to or replaced by the CSDR Settlement Discipline Regime requirements. Beyond CSDR, CSDs may additionally introduce or use supplementary tools (e.g. if required by a regulator or deemed reasonable by the CSD for its local market) in order to ensure high settlement efficiency.
4. ESMA and T2S documents served as the basis for creating this Framework. Large parts of the Framework are fully aligned and have been sourced from the discussions at the T2S CSDR Task Force as mentioned in the ‘T2S Penalty Mechanism’ document (version October 2017) and the subsequent T2S Change Request CR654⁹. For CSDs using the T2S settlement platform, in case of inconsistency between the ECSDA Framework and the relevant T2S documentation, the latter shall prevail. The Framework also covers penalties related aspects that are not subject to the T2S CSDR Task Force documents (when they are not covered by the T2S scope as noted in the Framework introduction¹⁰).
5. This document may be subject to changes, e.g. due to various working assumptions taken due to pending ESMA feedback or ongoing discussions within ECSDA or the market community. Material changes compared to the previous latest published Framework version are highlighted in light grey colour.
6. The Framework is shared with other relevant stakeholders (i.e. CSD participants, ECB, Central Counterparties, ESMA, and other European Union and national authorities) with the aim of alignment and information sharing.
7. According to CSDR and final ESMA RTS, the following principles must be applied by all EU CSDs:
 - A CSD shall provide for a cash penalty mechanism for participants that caused settlement fails.

⁷ A CSD may decide to subscribe to the Framework also in cases when it is based in an EU third-country jurisdiction and is subject to a legislation declared equivalent to the CSDR or even ahead of the recognition of non-EU legislation equivalent to the CSDR by the European Commission.

⁸ Please see the list of CSDs using the Framework as the market practice in Annex IV.

⁹ See ECB website for the latest version of the CR:

<https://www.ecb.europa.eu/paym/target/t2s/governance/html/changerequests.en.html>

¹⁰ In context of SDR RTS Art. 20, T2S CSDs are currently working on a specific document, separate from the T2S Framework Agreement and ECSDA Penalties Framework, to comply with the respective CSDR requirements described in this Article and the subsequent ESMA Q&A.

- Cash penalties are to be calculated on a daily basis for each business day that a matched (free of, with or against) payment settlement instruction fails to settle on or after its Intended Settlement Date (ISD), including those instructions that are ‘on hold’ or failing due to a lack of cash.
- Penalties shall also apply to instructions that matched in the securities settlement system *after* their ISD (‘late matching’, e.g. due to instruction entry after ISD).
- Cash penalties are calculated *as from* the ISD until the actual settlement or (bilateral) cancellation date of the instruction, considering¹¹:
 - Settlement Fail Penalty (SEFP): once the instruction is matched, penalties apply earliest from the ISD or the matching date (when matching took place after ISD and no settlement occurred on the matching date) to the date of actual settlement or cancellation of the instruction, in addition to Late Matching Fail penalties, when applicable;
 - Late Matching Fail Penalty (LMFP): penalties apply retroactively from the ISD until the actual matching date.
- As a general rule, penalty amounts shall be rounded up to maximum of two decimals.
- For settlement fails involving multiple CSDs (cross-CSD settlements), SDR penalties, if applicable, shall be calculated only by one CSD (the ‘Calculating-CSD’, i.e. the CSD where settlement is actually taking place based on the ‘actual place of settlement’ concept). This also means that an Investor-CSD being a participant in another CSD (e.g. Issuer CSD) shall comply with the Terms & Conditions of the latter CSD.
- Daily reports shall be provided to the CSD participants in order to allow them to reconcile and calculate the recharge of the penalty to their underlying clients where applicable.
- CSDs must redistribute the penalties only once they have been collected from their participants.
- The full amount collected as a penalty shall be redistributed to the participant that suffered from the fail at least on a monthly basis.
- Instructions with a CCP as counterparty (see CSDR SDR RTS Article 19 and Framework chapter 12.3 for details): CSD must a) calculate and report penalties for participants that are CCPs but not actually collect/ distribute any penalties and b) ensure that CCPs collect and redistribute fails penalties from/ to the relevant clearing members and provide a monthly report to the CSDs. The cash penalties shall not be configured as a revenue source for the CSD¹².

¹¹ Note: Both, a late matching fail penalty (LMFP) and a settlement fail penalty (SEFP), can apply on a single instruction; they may be charged to the delivering, receiving or both participants, depending on which of the two participants caused a) the late matching and b) the settlement fail. However, LMFP and SEFP cannot both apply for the same business day: either LMFP or SEFP can occur, depending on the matching timestamp (being before or after the CSD’s settlement cut-off time).

¹² However, CSDs have the possibility to charge for the cost of development and maintenance of their penalty system as a fee separate from the actual penalties amounts calculations and processing.

2 PENALTIES LIFECYCLE AND BUSINESS DAYS CALENDAR

This section covers the penalties lifecycle for both, intra-CSD and cross-CSD settlement fails scenarios:

A. Daily events:

- i. Daily Calculations
- ii. Daily Reporting

B. Monthly events:

- i. Monthly Appeal Period
- ii. Monthly Aggregated Amounts Provision
- iii. Monthly Payment (Collection and Redistribution)

For the 'Monthly Appeal Period', 'appeals' refer to the exceptional correction or update of previously calculated and reported penalties upon CSD or participant request (e.g. due to the application of incorrect or updated reference data) and limited to the cases provided in the ESMA CSDR Q&A.

Messaging and reporting aspects are covered in chapter 11 of this document.

2.1 INTRA-CSD SETTLEMENT FAILS

Daily and monthly events apply for the business days defined below.

2.1.1 Business Days calendars

Applicable business days calendars:

- the CSD's own settlement calendar¹³;
- the payment system calendar of the relevant currency.

Business days are those days on which an instruction can settle in the CSD (and in the relevant payment system in case of settlement versus payment); such "opening days" are excluding, for instance, week-ends.

Based on the above, a penalty shall not be applied:

- for 'free of payment' instructions: for the days when the CSD settlement system is closed.
- for 'against payment' instructions: for the days when the CSD settlement system and/ or the payment system of the relevant currency is closed (if the cash leg is to be settled in the payment system of the relevant currency).

¹³ Note: the calendars of the CSDs and the payment systems should be retained for at least three months for penalties calculation purposes.

2.1.2 Penalties Business Days (PBD)

ECSDA Member CSDs agreed on common principles for a harmonised process in the definition and counting of “business days” for the CSDR penalties management. For clarity, such specific “business days” are called “Penalties Business Days” (PBD). The PBDs may differ from the actual “business days” of a CSD’s settlement system or of a relevant payment system’s calendar (see 2.1.1).

2.1.3 Daily calculations

A CSD shall calculate daily penalties for each instruction that:

- i. failed to settle on its intended settlement date (SEFP); or
- ii. matched after its intended settlement date (LMFP¹⁴).

For the daily calculation (and reporting), the CSD own calendar is to be applied; if the CSD is closed on a specific day, it will not calculate any penalties.

For the computation of the Settlement Fail Penalties (SEFP) as well as the Late Matching Fail Penalties (LMFP), the (possibly different for FOP and DVP) CSD settlement cut-off times must be considered.

Daily penalties calculations for every single failed settlement instruction shall be completed by the CSD as soon as possible to make the daily reports available to its participants (including other directly linked CSDs) in a timely manner, i.e. the penalties Calculating-CSDs shall report until midday (12:00 p.m. Central European Time (CET)) while CSD’s depending on the reporting of a settlement platform (like T2S) or Calculating-CSD shall provide their reports ideally until latest 14:00 p.m. CET on the business day following the settlement fail. No “intraday” penalties calculation or reporting applies.

Daily penalties can only be calculated by CSDs when all relevant reference data is known to them. For instance, the daily reference price of the security will likely only be available to CSDs during the following business day. As such, the penalties will be calculated and reported for instructions that failed to settle on the previous business day (please also refer to the assumptions in chapter 5.2).

For every failing settlement instruction, the CSD will calculate, for each party, the net penalties (i.e. the single credit or debit net amount) per CSD, currency and counterparty on a daily basis.

Under exceptional circumstances (see ESMA CSDR Q&A “Settlement Discipline Questions 4 – Cash penalties: scope”), daily penalties previously calculated by the CSD for the current calendar month, could be amended (i.e. re-calculated due to changes in applicable reference data) or removed (i.e. cancelled) on any business day until the appeal period has ended (see chapters 22.1.6/ 2.2.4 for details).

¹⁴ For the specific case of ‘partially successful buy-in’ related settlement instructions, please refer to chapter 7.

Daily penalties previously removed by the CSD for the current calendar month, could be re-included on any business day until the appeal period has ended. If the applicable reference data has changed, the penalty will be re-calculated.

The penalties calculation methods are described in chapter 7.

2.1.4 Daily Reporting

CSDs will send a daily penalty report to their participants when there are new, amended, removed or re-included penalties during the day.

The penalty calculation period shall be one calendar month. For each business day, CSDs may generate:

- i. either a single report; or
- ii. two separate reports: one for the new penalties and one for the amended, removed or re-included ones, if applicable (e.g. such as described in the T2S penalty mechanism’s approach).

The “business days” used for penalties management may differ from the “actual business day” of a CSD or payment system calendar. Hence, the term “Penalties Business Day” (PBD) was introduced that applies to the below diagram.

CSDs shall report penalties for each “party” and aggregated per counterparty (i.e. a participant in this same CSD).

In case when no penalty is to be applied (i.e. no failed transaction resulted in new penalties, amendments, removals or re-inclusions) for one reporting day for a party, a ‘no activity’ report may be sent¹⁵.

CSDs shall deliver the daily reports to their participants after the closing of the settlement day on which (new or previous) penalties were calculated, amended, removed or re-included on the following business day. Daily reports will be provided in line with the CSD’s settlement system

¹⁵ CSDs may offer such ‘no activity’ reports upon subscription, so that its participants are able to choose to receive these reports.

business days calendar and reporting schedule but shall be provided by Calculating-CSDs until 12:00 p.m. CET, latest (general note: penalties for fails on a Friday will be calculated and reported either on Saturday, Sunday or Monday; in all cases, the business day date shall be the one of Monday).

2.1.5 Monthly Events

All CSDs shall follow the same principles to ensure that the appeal period and monthly penalty reporting are finished prior to the 15th PBD.

The ‘business days’ used for penalties management may differ from the ‘actual business days’ of a CSD or payment system calendar. Hence, the term ‘Penalties Business Day’ (PBD) was introduced that applies to the below diagram, illustrating the timeline for the monthly reporting, assessment and payment process:

Following MONTH (provision of aggregated amounts and payment)

‘Payment pre-advices’ are usually not provided by CSDs as the monthly reports and/ or PFOD instructions provide the necessary penalty amounts information. Therefore, ‘pre-advices’ are only generically mentioned or described in this Framework.

2.1.6 Monthly Appeal Period

CSDs shall apply a dedicated appeal period for CSD participants to assess single settlement fails penalty calculations, on an exceptional basis, within and maximum up to a defined point in time post the end of a calendar month.

The appeal period shall generally end on the 10th PBD (included) of the following month. If a CSD is closed on this date, the appeal period will close prior to the 10th PBD, so no appeal can be processed after.

Reasons for appeals may be the situations listed in the ESMA CSDR Q&As ‘Settlement Discipline Questions 4 – Cash penalties: scope’:

- ISIN suspension from trading¹⁶ or settlement (e.g. due to ‘undue creation or deletion of securities’ reconciliation issues);
- Settlement instructions involving cash settlement outside the securities settlement system operated by the CSD if, on the respective day, the relevant payment system is closed for settlement;
- Technical impossibilities at the CSD level that prevent settlement, such as a failure of the infrastructure components, a cyber-attack, network problems.

In the absence of a single central source, the reference prices applied by CSDs may slightly deviate for a single instrument that can be settled in multiple CSDs; such deviations do not represent a valid reason for lodging ‘appeals’ towards the CSDs (see also chapter 5.2).

Appeals can be lodged by CSD participants at any time during the calendar month, as from the moment of computation and reporting of the penalty, and maximum until (and including) the 10th PBD of the following month.

Each time that an appeal is accepted by a CSD, and a change is applied to a penalty, it will be reported on the following business day. Updates made by the CSD after the 10th PBD of the following month will be reported on the 12th PBD (the same way as it is done for any other business day).

By the close of business on the 12th PBD of the following month, any adjustment resulting from appeals shall be completed by the CSD, to be reported on the 13th PBD by the penalties Calculating-CSDs latest until midday (12:00 p.m. CET) while CSD’s depending on the reporting of a settlement platform (like T2S) or Calculating-CSD shall provide their reports ideally until latest 14:00 p.m. CET.

In order to apply for an appeal, sufficient information needs to be provided by the CSD participant to the CSD, covering at least:

- Reference of the penalty as well as the failed transaction details,
- Reason for the appeal; and
- Expected penalty amount and calculation details to be applied.

Appeals represent an exception handling by CSDs; until further notice, each CSD will design its own processes considering e.g. its GTCs, communication requirements to submit an appeal and providing the outcome of the appeal assessment to the appealing participant¹⁷.

¹⁶ While this is stated in the ESMA Q&As, ESMA advised ECSDA this is not meant to be mandatory but a non-exhaustive example for cases when CSD may not need to apply penalties. In this specific case, CSDs are usually not aware of the suspension taking place at trading level, hence, will not waive any penalties that were calculated.

¹⁷ Appeals can only be raised from parties/ participants that maintain a contractual relationship with the CSD.

2.1.7 Monthly aggregated amounts

At the latest on the 14th PBD of the following month, the CSD will report the monthly aggregated amounts for the penalties of the previous month (i.e. the aggregated amounts of the penalties computed for the business days of the previous month).

The 14th PBD is the last day when the monthly reporting shall be sent. If the CSD is closed on this day, the monthly reporting shall be sent prior to the 14th PBD.

For each party, per currency and counterparty, the CSD will sum up all the cash penalties that this party can be expecting to be credited or debited with.

If the net result is a credit, the party can expect a cash payment from this counterparty. If the result is a debit, the party will have to pay this counterparty.

Thus, the monthly reporting shall include, per currency and per party, all the net amounts against each of its counterparties for the penalties computed for the business days of the previous month.

It is recommended that one ‘global net amount’ (being the amount to be received minus the amount to be paid) will be provided by the CSDs in the monthly report on the 14th PBD. Otherwise, PFODs shall be generated by CSDs on the 1th PBD, but latest before the start of the 17th PBD, serving to timely notify the ‘global net amount’ to be debited from/ credited to the CSD participants.

The monthly reports will include only a subset of the details of each gross penalty that are provided in the daily reports.

For additional information, please refer to chapter 7.4 ‘Monthly cash penalties aggregation and global net amounts’.

2.1.8 Monthly payment (collection & redistribution)

On the 17th PBD of the following month, the CSD (and its participants) shall perform the payment process, i.e. the CSD shall collect and redistribute the penalties amounts to/ from its participants.

If the CSD and/ or the payment system of the currency is closed on the 17th PBD, the payment shall be done on the next possible business day.

For each party, the net amount (to be paid or to be received by a CSD participant) shall be reported by the CSD latest on the 15th PBD thereby providing time to perform FX transactions (if required) before the payment date (17th PBD).

Each CSD participant will have to pay (for each currency, if applicable) the exact amount as reported by the CSD.

Relevant cleared settlement transactions fails involving CCPs shall be excluded from the monthly payment process (but part of the daily and monthly reports); see chapter 12.3.

Depending on their set-up (having/ not having a banking license) and national specificities, CSDs will use different models for the actual penalties’ payments processing; intra-CSD payment processes may also differ from the cross-CSD payments.

The following possible payment models were identified:

- CSD triggers direct debits and/ or cash transfers;
- CSD generates PFOD instructions;
- Cash is transferred using a payment bank.

CSDs may define appropriate measures (to be described in the relevant contractual documents with the CSD participants) to ensure CSD participants comply with their payment obligations to the CSD on time on the 17th PBD to avoid delays and processing issues due to a lacking or incomplete penalties collection by the CSD.

For detailed information about the monthly payment process, please refer to chapter 10.

2.2 CROSS-CSD SETTLEMENT FAILS (FOR CSD DIRECT LINKS TO OTHER CSDs)

Daily and monthly events apply for the business days defined below.

2.2.1 Business Days calendars

Applicable business days calendars used for the penalties purposes can be the following:

- Calculating-CSD's settlement penalties calendar¹⁸;
- Payment system's calendar of the relevant currency.

Business days are those days on which an instruction can settle in the Calculating-CSD (and in the relevant payment system in case of settlement versus payment); such 'opening days' are excluding, for instance, weekends.

Based on the above, a penalty shall not be applied:

- For the 'free of payment' instructions: for the days when the Calculating-CSD settlement system is closed;
- For the 'against payment' instructions: for the days when the Calculating-CSD's settlement system and/ or the payment system of the relevant currency is closed (if the cash leg is to be settled in the payment system of the relevant currency).

2.2.2 Penalties Business Days (PBD)

The concept of 'Penalties Business Days', as described in chapter 2.1.2, is used to achieve a harmonised process across CSDs. This is of paramount importance in the management of the cross-CSD settlement fails penalties processing.

¹⁸ Note: The calendars of the CSDs and the payment systems should be retained for at least three months for penalties calculation purposes.

2.2.3 Daily calculations

For the daily calculation (and reporting), the Calculating-CSD's calendar is to be applied. If the Calculating-CSD is closed on a specific day, it will not calculate any penalty.

The same process as the one mentioned in chapter 2.1.1 shall apply when the CSD is acting as an Issuer-CSD (for an Investor-CSD).

In line with the 'actual place of settlement' concept, if the CSD is acting as an Investor-CSD, it shall wait for the daily amounts to be provided by the Calculating-CSD where settlement is actually taking place and report them afterward to its own participants.

To avoid procedural complexity and reconciliation issues, the Investor-CSD shall not make its own penalty calculations but rely on the Calculating-CSD¹⁹.

The daily calculation performed by the Calculating-CSD considers the Investor-CSD as a standard participant (in the other CSD's books). It means that the Calculating-CSD cannot provide the daily penalties at the level of the Investor-CSD's participants.

The Calculating-CSD shall report the daily penalties to the Investor-CSD, as soon as possible and, at the latest, until 12:00 p.m. CET on the business day following the settlement fail. This is done in order for the Investor-CSD to report these cross-CSD penalties in a timely manner to its own participants.

2.2.4 Daily Reporting

The same process as the one mentioned in chapter 2.1.4 shall apply when the CSD is acting as penalties Calculating-CSD (for an Investor-CSD).

CSDs shall send a daily penalty report to their CSD participants when there are new, amended, removed, or re-included penalties.

The sending of the daily reporting will depend on the CSDs' settlement system business days calendars.

The daily reporting shall segregate the penalties resulting from the intra-CSD activity, and the ones resulting from the cross-CSD activity. In such a case, the CSD participant might receive up to four reports, for the same business day:

1. Report including all-new intra-CSD penalties;
2. Report including the penalties intra-CSD which were amended, removed or re-included (unless included in the 'new penalties' report);
3. Report including all-new cross-CSD penalties;

¹⁹ If all involved CSDs are subject to CSDR, only the CSD where settlement is actually taking place shall calculate the penalties; all CSDs involved will have to report and collect/ redistribute. Note for T2S external settlement, T2S will (until further notice) calculate in any case. T2S CSDs will replace these penalties by the ones reported by the Calculating-CSD. Please refer to chapter 9 'Cross-CSD settlement fails' and Annex III for a description of all settlement scenarios.

4. Report including the penalties cross-CSD which were amended, removed or re-included (unless included in the ‘new penalties’ report).

Calculating-CSDs shall provide the daily reports latest until midday (12:00 p.m. CET) while CSD’s depending on the reporting of a settlement platform (like T2S) or Calculating-CSD shall provide their reports ideally until latest 14:00 p.m. CET. The receiving CSD will in turn report these penalties to its participants. Thus, CSD participants should consider that cross-CSD penalties may be reported later than intra-CSD penalties (depending on the time of receipt from the Calculating-CSD).

The penalty information shall be passed on to the part of the failing settlement instruction, as it appears in the Investor-CSD’s records.

In the case of a CSD-link, the failing party may be a participant or an underlying client of a participant of the relevant linked CSD. In the case of indirect and operated direct²⁰ links, the information flow is longer compared to a direct link, i.e. it could go from the CSD reporting the penalties to the intermediary acting on behalf of the CSD to the customer of the intermediary (i.e. the CSD), and then to the underlying CSD participant. How this information flow is technically ensured is subject to specification by the involved CSDs.

2.2.5 Monthly Events

The monthly events, in a cross-CSD scenario, are identical to the ones in an Intra-CSD scenario for the ‘First month’ (see chapter 2.1.3).

A difference applies related to the end of the appeal period (as highlighted in red).

The ‘business days’ used for penalties management may differ from the ‘actual business days’ of a CSD or payment system calendar. Hence, the term ‘Penalties Business Day’ (PBD) is introduced that applies to the below diagram, illustrating the timeline for the monthly reporting, assessment and payment process:

²⁰ ‘Operated’ means the CSD has a direct link/ account with the other CSD that is operated by an agent.

Following MONTH (provision of aggregated amounts and payment)

Note that ‘payment pre-advices’ are usually not provided by CSDs as the monthly reports and/ or PFOD instructions provide the necessary penalty amounts information; therefore, ‘pre-advices’ are only generically mentioned or described in this Framework.

2.2.6 Monthly Appeal Period

While the general process as described in chapter 2.1.6 applies, in a cross-CSD context, the appeal period ends at close of business on the 11th PBD of the following month. It allows CSDs to still pass on to other CSDs the appeals requested by CSD participants on the 10th PBD. At close of business on the 11th Penalties Business Day, CSDs shall no longer request appeals to other CSDs. In case the 11th PBD is a CSD closing date, the appeal end date will be preponed to an earlier date. It means that the end of the appeal period for participants (planned on the 10th PBD) will also be moved to an earlier date.

An appeal requested latest until the 10th PBD by a CSD participant (in line with chapter 2.1.5) and accepted by a CSD, must be sent to the other CSD on the 11th PBD, and thus will be reported to the CSD participant on the 12th PBD (depending on the settlement chain).

By close of business on the 12th PBD of the following month, any adjustment resulting from appeals shall be completed by the CSD, to be reported on the 13th PBD ideally latest until 14:00h p.m. CET.

Any Investor-CSD may request an appeal to the Issuer-CSD to remove penalties caused by technical impossibilities at the CSD, as referred to in chapters 2.1.6, and for any reason deemed justified by the Investor-CSD. The Investor-CSD will lodge an appeal including its reasoning at the Issuer-CSD during the applicable appeal period. The Issuer-CSD will process the appeal as received from the Investor-CSD and remove the penalty applied by the Issuer-CSD.

2.2.7 Monthly aggregated amounts

The general process will be identical to the one described for Intra-CSD settlement fails (see chapter 2.1.7). The 14th PBD is the last day when the monthly reporting shall be sent. If the Calculating-CSD or the calculating settlement platform is closed on this day, the monthly reporting shall be sent prior to the 14th PBD.

It is recommended that one ‘global net amount’ will be provided by the Calculating-CSD in the monthly report on the 14th PBD. Alternatively or in addition PFODs shall be generated by CSDs on the 15th PBD but latest before the start of the 17th PBD, serving to timely notify the ‘global net amount’ to be debited from/ credited to the parties/ CSD participants.

For additional information, please refer to chapter 7.4 ‘Monthly cash penalties aggregation and global net amounts’.

“
_

2.2.8 Monthly payment (collection and redistribution)

In a cross-CSD scenario, the process will slightly differ compared to 2.1.8, as CSDs are not themselves responsible for supplying the funds to proceed with the penalties payment.

On the 17th PBD of the month, all involved CSDs shall have collected the amounts due by their participants (including those that are CSDs themselves), in order to be able to start the payment process across CSDs.

If the CSD and/ or the payment system of the currency is closed on the 17th PBD the payment will have to be done on the next possible business day.

Each CSD participant and CSD will have to pay (for each currency, if applicable) the exact amount as reported by the other CSD.

CSDs may define appropriate measures (to be described in the relevant contractual documents with the CSD participants) to ensure CSD participants comply with their payment obligations (in each currency reported) to the CSD on time on the 17th PBD to avoid delays and processing issues due to a lacking or incomplete penalties collection.

For detailed information about the monthly payment process, please refer to chapter 10.

3 PENALTIES SCOPE

Several aspects (mainly content and technical) related to the usage of the ESMA databases mentioned in this section are currently discussed amongst CSDs and are subject to ESMA clarification. Hence, the Framework may be adapted at a later stage.

3.1 INSTRUCTIONS SUBJECT TO CASH PENALTIES – GENERAL SCOPE

Settlement fails penalties shall be calculated for all settlement instructions, free of, against or with payment, that are:

- matched (prior, on or after their Intended Settlement Date (ISD)), and
- failing to settle on and after their ISD.

WORKING ASSUMPTION (ESMA/EC to confirm): The only exemptions are:

- i. Settlement transactions that do not represent ‘transfer orders²¹’ according to the second indent of point (i) of Article 2 of Directive 98/26/EC [Settlement Finality Directive];
- ii. Corporate actions on stock (ISO transaction code equals ‘CORP’);
- iii. Technical instructions, e.g. T2S automatic realignments;
- iv. T2S Settlement restrictions²².

Note:

- (T2S) Auto-collateralisation operations, though automatically generated, are considered in scope.
- **OPEN ITEM (ESMA/EC to clarify):** Primary issuance settlements are in scope (except the process of the initial creation of securities which cannot be regarded as a ‘transfer order’ from a legal standpoint²³).
- **OPEN ITEM (ESMA/EC to clarify):** treatment of Investment Funds redemptions/subscriptions order routing instructions (CSD model vs. TA model/ transfer order vs. settlement instructions model).
- For CCP-related aspects, please refer to chapter 12.3.

²¹ Definition: ‘Any instruction by a participant to place at the disposal of a recipient an amount of money by means of a book entry on the accounts of a credit institution, a central bank, a central counterparty or a settlement agent, or any instruction which results in the assumption or discharge of a payment obligation as defined by the rules of the system, or an instruction by a participant to transfer the title to, or interest in, a security or securities by means of a book entry on a register, or otherwise.’

²² A T2S Settlement restriction is an Intra-position movement. It is used to manage restriction on a securities position which can be: a securities blocking; a securities reservation; or a securities earmarking.

²³ T2S CSDR TF wording; note re. Investment funds issuance (creation/ redemption), based on ECB feedback: unlike for corporate actions where the Issuers are paying CSD participants, there is generally no obligation on the side of participants, for Issuance and Fund Investment the counterparties are CSD participants who are buyers, so these shall be considered as normal transactions, subject to penalties.

3.2 INSTRUCTIONS SUBJECT TO CASH PENALTIES - CROSS-CSD SETTLEMENT SCOPE

In the context of settlement transactions beyond the CSD's own system, various scenarios were elaborated by T2S CSDR Task Force and ECSDA, yet to be officially endorsed by ESMA. These must be considered by CSDs to define if a failing instruction is actually subject to penalties; please refer to chapter 9 for details.

In summary, an 'actual place of settlement' concept applies:

- when the actual settlement is taking place in a CSD subject to CSDR, penalties shall be calculated and applied by this CSD ('Calculating-CSD'); the (Investor-) CSD being a participant of the other CSD is obliged to report the penalties further to its own participants and also perform the cash collection and redistribution process;
- when the actual settlement is taking place in a third country CSD (not subject to CSDR), no (CSDR) penalties shall apply.

Notes regarding T2S:

- a. T2S will always calculate and report the penalties, even if T2S is not the actual place of settlement; hence, it will be up to the T2S CSDs to remove these penalties and replace them by the ones reported by the Calculating-CSD (i.e. the 'external CSD' in T2S terms);
- b. when settlement takes place between two Investor-CSDs, the subsequent realignment transactions on Issuer-CSD level shall not be subject to settlement fails penalties, independent if the Issuer-CSD is inside or outside T2S (see 'T2S realignment' exemption stated in chapter 3.1).

3.3 INSTRUMENTS SUBJECT TO PENALTIES

Settlement fails penalties must be calculated in case a matched settlement instruction in scope of SDR is failing to settle and the instruments to be transferred are:

WORKING ASSUMPTION (ESMA to confirm):

- CSD-eligible MiFID II/ MiFIR financial instruments:
 - admitted to trading or traded on an EU trading venue (see ESMA FIRDS databases²⁴);
 - or
 - cleared (or eligible for clearing) by an EU CCP.

²⁴ https://registers.esma.europa.eu/publication/searchRegister?core=esma_registers_firds Note: "As the FIRDS database also contains instruments that are not CSD-eligible (like derivatives), CSDs should limit the query to instruments being eligible in their CSD settlement system.

Please consider the ECSDA Penalties Reference Data Rules & Recommendations in Annex VII.

- excluding shares when their principal trading venue is located in a third country²⁵.

Note: the relevant MiFID II/ MiFIR financial instruments types are:

- transferable securities [i.e. equity- and bond- (like) instruments (including ETFs) and giving a right to buy or sell any of those],
- money-market instruments,
- UCITS, and
- emission allowances.

I.e. to derive the concrete list of ISINs subject to SDR, a CSD shall:

- a) use the ESMA FIRDS database for MIFID II/ MiFIR instruments;
- b) identify the ISINs eligible for settlement in the CSD; and
- c) eliminate those shares that are exempted from the Short Selling Regulation.

Please also refer to chapter 5 for the reference data required to calculate penalties and consider the ECSDA Reference Data Rules & Recommendations in Annex VII.

²⁵ CSDR Art. 7.13 states: 'This [CSDR] Article [7] shall not apply where **the principal venue for the trading of shares** is located in a third country. The location of the principal venue for the trading of shares shall be determined in accordance with Article 16 of Regulation (EU) No 236/2012.'. See 'Short Selling Regulation (SSR)' exempted instrument list: https://registers.esma.europa.eu/publication/searchRegister?core=esma_registers_mifid_shsexs

4 IDENTIFICATION OF THE PARTY TO BE PENALISED

4.1 LATE MATCHING FAIL PENALTY (LMFP)

Any settlement instruction being in scope of the penalties calculation that is matched **after** the relevant CSD settlement cut-off time of its ISD will be subject to computation of Late Matching Fail Penalties (LMFP) retroactively for each past business day that it failed to settle.

The penalty is charged to the participant who was last to enter or modify the relevant settlement instruction (e.g. 'accepted timestamp' is later than the one of the counterparty's instruction) for the periods between the ISD and the day of matching of the instruction; when both parties send their instructions 'late' after the ISD, only one of the two counterparts of a transaction will be imposed with a LMFP.

Please also refer to chapter 7 regarding the special handling in case of only partially successful buy-ins.

4.1.1 LMFP special case: 'already matched' instructions

If a CSD is offering the possibility to send settlement instructions as 'already matched' (i.e. both instructions are sent at the same time as matched; often used for CCP instructions), these settlement instructions will be subject to the computation of LMFPs in case they are sent after the ISD.

In such cases, it is not always possible for the CSD (and never possible for the T2S settlement platform) to determine the real failing party by comparing the accepted timestamps (as both legs have the same timestamp).

In such cases, the penalty will be applied to the instructing party of the two settlement instructions (i.e. the party who sent the instructions to the CSD).

When the instructing party is one of the counterparties of the failed settlement transaction, it will be up to the instructing party (e.g. CCP) to inform the CSD to whom to allocate the penalty (i.e. the delivering or the receiving participant) and enable the CSD to adjust the penalty assignment accordingly²⁶.

When the instructing party is a third party, the penalty might not be applicable to the instructing party of the two settlement instructions as this instructing party does not have an account in the CSD's books (e.g. electronic trading platforms/ Trading Venues). In such a case, if there is no request to re-allocate the penalty to one of the counterparties during the appeal period, the delivering party might be the one to be penalised by default. It will be up to the delivering party, in agreement with the receiving party, to request the CSD to perform a re-allocation of the penalty to the receiving party if the receiving party was the real defaulting party.

²⁶ Such a case will likely be very rare, as CCPs are normally sending their settlement instructions prior to the ISD.

Note: the penalised party may claim its dues outside the CSD penalty mechanism if the real failing party does not have a securities account in the CSD's books or is no party in the settlement transaction (when, for instance, a Trading Venue is the real failing party, the penalty will be charged to the delivering party by default; the delivering party may pass on its penalty bilaterally to the Trading Venue).

4.2 SETTLEMENT FAIL PENALTY (SEFP)

Any settlement instruction being in scope of the penalties' calculation that

- i. is matched **before** the relevant cut-off of a given business day; and
- ii. has reached its ISD; and
- iii. **fails to settle** on that ISD or the day it is matched (late, i.e. after ISD) and after the ISD,

shall be subject to the computation of Settlement Fail Penalties (SEFP) for each business day the instruction is failing to settle. A settlement instruction that 'fails to settle on ISD' must be understood as a settlement instruction that is not cancelled and remaining to be settled, fully or partially, by the time of the end of settlement processing of the relevant CSD (settlement cut-off time).

The relevant cut-off is the key point in time to take a 'snapshot' of the status and fail reason of a settlement instruction and determine its eligibility for penalty application. A penalty shall be imposed to a CSD participant if its settlement instruction fulfills, at the time of the end of processing of the relevant settlement cut-off, any of the below conditions:

- the instruction is '**on hold**' (note: when 'on hold' is identified for one instruction, no additional check for a 'lack of cash' or 'lack of securities' of the counterparty instruction shall be made by the CSD); or
- the instruction **failed the settlement eligibility or provision check**, i.e. the fail reason associated with this instruction is '**lack of securities**' or '**lack of cash**' (note: when 'lack of securities' is identified no additional fail check for a 'lack of cash' of the counterparty instruction shall be made by the CSD).

Note: Settlement Fails Penalties (SEFP) apply in addition to LMFP as described in chapter 4.1. when the 'matched-late' instruction is not actually settled before the CSD settlement cut-off time of the matching business day.

It is possible that the two counterparts of a transaction are imposed with a SEFP, for example, when both legs of a matched instruction are 'on hold' until the CSD settlement processing cut-off time. In such a scenario, both parties will be imposed with a SEFP (i.e. the delivering party will be charged with 'lack of securities' penalties and the receiving party with 'lack of cash' penalties).

5 REFERENCE DATA REQUIRED FOR PENALTY CALCULATIONS

In order to calculate the daily settlement fails penalties, the information described in this section needs to be available to or sourced by CSDs.

When reference data (e.g. CFI code, security reference price) required to calculate penalties is missing by the calculation date, penalty amounts shall be set to ‘zero’ until the data becomes available unless the latest available reference data can be applied by the CSD until it is updated.

The latest point in time for consideration of new (or updated) reference data by the CSD shall be the 11th PBD of the following month. That means if new or updated data for calculating penalties are available to the CSD only after the 11th PBD, no retroactive penalties calculations or adaptations can be made by CSDs.

Please refer to chapter 8 related to updated reference data leading to changes of previously calculated penalties.

It should also be noted that a number of (mainly content and technical) aspects in regard to the usage of the ESMA databases mentioned in this section are currently discussed amongst CSDs and are subject to ESMA clarification. Hence, the Framework may be adapted at a later stage.

In addition, the information contained in Annex VII ‘ECSDA Penalties Reference Data Rules & Recommendations’ of this Framework should be considered.

5.1 LIST OF INSTRUMENTS SUBJECT TO PENALTIES

For the identification of instruments in scope, please refer to chapter 3.3.

In short, using ESMA publicly available information, the CSD-eligible ISINs listed in the MiFID II/ MiFIR ‘FIRDS’ databases to be diminished by those shares exempted from the EU Short Selling Regulation (SSR) will be considered for the penalties application.

5.2 DAILY REFERENCE PRICE

CSDs need to source (or derive) and apply a reference price for each day when the settlement instructions fail to settle. The prices applied shall be in line with CSDR price determination rules²⁷ for the securities in the scope of the CSDR penalty regime and eligible for settlement in the CSD and considering information in the ESMA FIRDS and FITRS databases:

- i. for shares and similar instruments: apply the closing price of the ‘most relevant market’ (MRM) in terms of liquidity (the MRM information – but no price data - is available in the ESMA FITRS database);
- ii. **WORKING ASSUMPTION (ESMA to confirm):** for other instruments: apply the closing price of the ‘most relevant market’ (MRM) in terms of ‘highest turnover’

²⁷ See Article 7 of the Delegated Regulation: http://eur-lex.europa.eu/eli/reg_del/2017/389/oj

(trading venue to be derived from the ESMA FIRDS database) whereby the MRM is assessed according to rule ‘RE17- Rule for the definition of the ‘Most relevant market’ (MRM) by liquidity and highest turnover’ in Annex VII (note: rules for ‘HIGHEST TURNOVER’ information derivation in FIRDS are expected to be provided by ESMA in 2021);

- iii. **WORKING ASSUMPTION (ESMA to confirm):** for instruments for which no updated daily MiFID II/ MiFIR price is available, use the latest available price from a MiFID II/ MiFIR or other trading venue or - when no trading venue price is available at all - a price as determined by the CSD (see below).

In case of lacking MiFID II/ MiFIR or trading venue price data, two situations should be considered as follows:

- Where a market value can be derived, the CSD will apply a market price determined by the CSD, according to the price determination method approved by the CSD’s National Competent Authority²⁸;
- **WORKING ASSUMPTION (ESMA to confirm):** Where no market value is available at all, CSDs will use:
 - for debt instruments: nominal value (in the ISIN denomination currency);
 - for non-debt instruments: default price (e.g. issue price).

Considering the above, CSDs must source (usually via their data vendors) the applicable prices from the individual MIFID II/ MiFIR trading venue relevant for a single instrument, identifying the relevant trading venue by using the ESMA FITRS and FIRDS databases²⁹:

- For shares and similar (covered in the ESMA FITRS database):
 - the relevant information can be found here: <https://www.esma.europa.eu/databases-library/registers-and-data>
 - use file ‘Financial Instruments Transparency System (FITRS)’ to open: https://registers.esma.europa.eu/publication/searchRegister?core=esma_registers_fitrs_files

²⁸ In such case, the reference prices applied by CSDs may deviate for a single (EU or non-EU) instrument that can be settled in multiple CSDs. However, the impact would be limited to intra-CSD settlement fails (as for cross-CSD settlement fails, the ‘actual place of settlement’ concept applies, see chapter 9).

²⁹ Please note that ESMA does not publish the trading prices.

Disclaimer

MIFID II/MIFIR introduces transparency requirements for equities, bonds, structured finance products, emission allowances and derivatives, empowering competent authorities (CAs) to waive the obligation for market operators and investment firms operating a trading venue, to make public pre-trade information for non-equity instruments. Furthermore, transactions may also benefit from deferred publication. In addition, for equity instruments the Regulation introduces a tick size regime and the determination of the standard market size (SMS) and of the most relevant market in terms of liquidity.

Commission Delegated Regulations 2017/567, 2017/587 and 2017/4/588, on transparency requirements for equity instruments, require the relevant competent authorities to calculate and publish information related to the liquidity classification, the transparency thresholds (LIS and SMS) and tick size band assessment of equities.

Commission Delegated Regulation 2017/583 on transparency requirements for non-equity instruments requires the relevant competent authorities to publish information on the liquidity classification of financial instruments, sizes large in scale compared to the standard market size (LIS) and the size specific to the instrument (SSTI).

ESMA publishes the information with utmost care and to the best of its ability. Given the scope and complexity of this project, including the various underlying data sources, changes may be received from reporting entities and subsequently published by the system on a regular basis. ESMA is not able to provide any representation or warranty that the available content is complete, accurate or up to date.

Please note that for instruments available for trading before 3 January 2018, and in accordance with transitional provisions of the regulations referred to above, the transparency requirements, that will be applicable to equity and non-equity instruments, are provided on the ESMA website: [Transparency Calculations](#). The previous sentence does not apply to the liquidity assessment for bond instruments (except ETCs and ETNs) for which the Transitional Transparency Calculations ceased to apply from 16 May 2018 and all the relevant information will be available through the Financial Instruments Transparency System (FITRS). From 1 August 2018, the quarterly liquidity assessment for bonds is published only for bonds for which trading venues submitted reports for at least 80% of the trading days in the relevant reference period. For the rest of the financial instruments, in the event that transparency calculations are published for a specific instrument, both in the files hosted in that site and in the Financial Instrument Transparency System, those published in the files hosted in the [Transparency Calculations](#) should prevail. Detailed information on how to find the relevant transparency calculations for a specific instrument or sub-class is provided in the related FAQ.

In addition to the above provisions, attention is also drawn to the [Legal Notice](#) on the ESMA website.

The publication of the information on this website does not prejudice the results of verifications on the completeness and correctness of the transposition of EU law into national law.

This database contains also data related to European Economic Area (EEA) / European Free Trade Association (EFTA) States based on the notifications received by ESMA, the publication of which does not affect the status of incorporation of relevant EU law into the EEA Agreement and any related legal consequences.

Disclaimer

In accordance with Article 27 of Regulation (EU) No 600/2014 (MiFIR) [1] and Article 4 of Regulation (EU) No 596/2014 (MAR) [2], trading venues and systematic internalisers shall submit reference data for the relevant financial instruments to national competent authorities (NCAs) who will subsequently transmit it to ESMA for publication on its website.

ESMA collects data from trading venues and NCAs and makes it available on its website in accordance with MiFIR requirements.

ESMA publishes the information with utmost care and to the best of its ability. Given the scope and complexity of this project, including the various underlying data sources, changes may be received from reporting entities and subsequently published by the system on a daily basis.

ESMA continuously monitor the quality of the information received. However, ESMA is not able to provide any representation or warranty that the available content is complete, accurate or up to date.

The publication of the information on this website does not prejudice the results of verifications on the completeness and correctness of the transposition of EU law into national law.

This database contains also data related to European Economic Area (EEA) / European Free Trade Association (EFTA) States based on the notifications received by ESMA, the publication of which does not affect the status of incorporation of relevant EU law into the EEA Agreement and any related legal consequences.

In addition to the above provisions, attention is also drawn to the [Legal Notice](#) on the ESMA website.

Due to the huge size of the database (containing more than twelve million entries, including derivatives), the data must be extracted and electronically checked for relevant updates on a daily basis.

In the absence of a single central source, the reference prices applied by CSDs may slightly deviate for a single instrument that can be settled in multiple CSDs. Such deviations do not represent a valid reason for lodging ‘appeals’ towards the CSDs (see also chapters 2.1.6, 2.2.6).

For all technical issues related to the ESMA databases, the ESMA Support Team can be reached at support@esma.europa.eu.

The daily reference price used for calculating the fails penalties is the price of each business day when the settlement instruction is subject to penalty calculation (i.e. using maximum of three months of historical prices when relevant, e.g. for late matching fails), independently from when the calculation is performed.

That means that the reference price for the penalty calculation of each fail day shall be the one of the relevant fail dates.

Example

An FOP instruction with Intended Settlement Date 05.10.18 only matches (but does not settle) on 07.10.18 – reference prices for 05.10., 06.10. (for LMFP calculation) and 07.10.18 (for SEFP calculation) are to be applied (assuming that these are business days and the CSD system was open for settlement).

Therefore, CSDs are required to source and store market price data for all instruments in the scope of the penalty regime on a daily basis³⁰. In the absence of a single European price feed or source for all CSDs, this has to be managed individually by CSDs via their data vendors, unless CSDs can source price data themselves.

Reference price data shall not be reported or otherwise made available to parties other than the responsible CSD or its penalties mechanism provider (i.e. the penalty messages as described in chapter 11 shall contain 'NONREF' or remain blank in the respective price fields).

The application of identical reference prices for the same ISIN by CSDs in a cross-CSD settlement context is ensured by the process design as CSDs shall always use the penalties calculation as provided to them from the Calculating-CSD where settlement is actually taking place ('actual place of settlement' concept; see detailed scenarios in chapter 9), i.e. the penalties as calculated and reported by this CSD to its participants (that may as well be CSDs) shall always be applied as such by the CSDs involved in the settlement chain.

The amount imposed by the penalty **should** be calculated:

- For against payment settlement fails, in the currency of the cash leg.

Note that the ICSDs Euroclear Bank SA/ NV and Clearstream Banking Luxembourg S.A., in their role of the penalties Calculating-CSDs for their internal and Bridge settlement fails, will use a single currency (EUR) for all their penalties calculations (related to both, free of and against payment settlement fails) and thus convert all daily penalties into the single default currency. The default currency does not apply to penalties calculated by other CSDs and reported to the ICSDs for settlement instructions that actually failed to settle outside the two ICSDs' settlement systems and the Bridge.

- For free of payment settlement fails:
 - either in the currency of the underlying security if the instrument is quoted in nominal or percent (usually fixed income instruments); or
 - in the currency of the daily reference price, if the underlying security is quoted in units (usually shares); or
 - in a default currency, as defined by and eligible for settlement in the Calculating-CSD or settlement platform.

This may lead to an FX conversion need (see chapter 6).

5.3 INSTRUMENT TYPE

The instrument type classification will be derived from a CFI code mapping table included in the Annex II (Document 2).

³⁰ For instruments with specific features like pool factors, CSDs shall apply the price as sourced from the Trading Venue or determined by the CSD, without any special modifications for penalties calculation purposes.

The ‘Financial Instrument Type’ is a classification of securities according to which CSDs shall report settlement fails to regulators, as laid out in the CSDR SDR RTS Annex 1, table 1³¹.

This classification is also relevant, together with the Liquidity and SME Growth Market classifications for the identification of the applicable penalty rate for any given failed settlement instruction.

Therefore, CSDs shall, for each security, derive the Financial Instrument Type classification from the CFI Code of the same security, according to the following mapping table (source: T2S CR654 dd. 04.10.2018):

CFI Code Structure	Type of Financial Instrument
Position 1 of the code is ‘E’	SHRS
Position 1 of the code is ‘D’ and position 4 is ‘T’ or ‘C’, or position 2 is ‘N’	SOVR
Position 1 of the code is ‘D’, position 2 is neither ‘Y’ or ‘N’ and Position 4 is neither ‘T’ nor ‘C’	DEBT
Position 1 of the code is ‘R’	SECU
Position 1 of the code is ‘C’ and position 2 is ‘E’	ETFS
Position 1 of the code is ‘C’ and position 2 is not ‘E’	UCIT
Position 1 of the code is ‘D’, position 2 is ‘Y’ and position 4 is neither ‘T’ nor ‘C’	MMKT
Position 1 is ‘T’, position 2 is ‘T’ and position 3 is ‘N’	EMAL
Residual category	OTHR

5.4 INSTRUMENT LIQUIDITY/ILLIQUIDITY CLASSIFICATION

The liquidity indicator is a binary classification of securities that, for the penalties calculation, only applies to shares, i.e. when the Financial Instrument Type of the security is ‘SHRS’ and specifies if the security is ‘Liquid’ or ‘Illiquid’³².

For instruments not listed in the FITRS Equity Transparency Calculation Results at all and for instruments for which the CFI code starts with ‘E’ but that are not listed in the relevant FITRS ‘Equity Instruments’ file, the applicable value shall be ‘illiquid’.

This classification of securities is an attribute of the securities subject to penalties and must be derived by the CSDs from the ESMA database (WORKING ASSUMPTION, ESMA to officially confirm): <https://www.esma.europa.eu/databases-library/registers-and-data>

³¹ https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=uriserv:OJ.L_.2018.230.01.0001.01.ENG&toc=OJ:L:2018:230:TOC

³² ""See e.g. Rules RE15 and RE20 of the ‘ECSDA Rules & Recommendations’ document in Annex VII for details.

- Use the file ‘[Financial Instruments Transparency System \(FITRS\)](#)’ to open and filter on ‘Instrument Type’ equals ‘Equity Instruments’.

- ‘Please refer to the detailed ESMA information: https://registers.esma.europa.eu/publication/searchRegister?core=esma_registers_fitrs_files
- Then use the link to ‘Instructions on how to download and use transparency results files’ and use the document stored under: https://www.esma.europa.eu/sites/default/files/library/esma65-8-5240_firds_download_and_use_of_full_and_delta_transparency_results_files.pdf’

In summary, FULECR/ DLTECR records occur in one of the following cases and are to be assessed according to Rule RE19 ‘Rule for usage of FITRS reporting markers’ of the ‘ECSDA Penalties Reference Data Rules & Recommendations’ document in Annex VII:

Reporting period	Type of calculation	Type of instrument	Period of application
Empty	Estimates	Equity/ Equity-like	Liquidity and LIS/ SMS thresholds apply from first

			trading date for six weeks Calculation results may be updated e.g. when refined estimates are provided NCAs or ESMA.
Four calendar weeks	Calculations based on first four weeks of trading	Equity/ Equity-like	Liquidity and LIS/ SMS thresholds apply from six calendar weeks after the first trading date, until the next yearly calculation as per table 24
1/Jan/Y – 31/Dec/Y	Yearly calculations	Equity/ Equity-like	Liquidity and LIS/ SMS thresholds apply from 1 April of year (Y+1) until 31 March of year (Y+2)

For all technical issues related to the ESMA databases, the ESMA Support Team can be reached at support@esma.europa.eu, copying also FITRS-Secondary-Markets@esma.europa.eu.

5.5 INSTRUMENT TRADING SEGMENT ‘SME GROWTH MARKET’ - PLACE OF TRADING INFORMATION

The SME Growth Market indicator is a binary classification of securities that applies to any type of securities and that specifies whether the security is listed in an SME Growth Market.

For the sake of identifying the applicable penalty rate, CSDs need to identify whether the instrument to be settled was actually traded on an EU SME Growth Market by verifying both, the receiving and delivering instruction of the settlement transaction.

Only when both instructions show the same ‘Place of trading’ four-digit MIC (Market Identifier Code) the reduced penalty rate applicable to SME instruments shall be applied.

The list of SME Growth Market Trading Venues can be found on the ESMA website:

<https://www.esma.europa.eu/databases-library/registers-and-data>

Use file: ‘MiFID II/MiFIR TV/SI/DRSP’ to open:

https://registers.esma.europa.eu/publication/searchRegister?core=esma_registers_upreg

Considering the attached screenshot:

- set filter in selection field ‘SME’ to ‘YES’;

- in order to see the MIC³³, the detailed view ‘More Info’ must be opened.

³³ As of 15.12.2020, the following venues' MICs represent EU SME Growth Markets: XAIM, AIMX, GBUL, XZAP, DSME, SSME, FSME, ALXP, XESM, ALXL, ALXB, XETW, XETS, FRAS, NSME, XNCO, WMTF, GROW.

5.6 INSTRUMENT CATEGORY PENALTY RATE

Considering all the previously mentioned decision criteria, CSDs shall apply the ESMA penalty rates as quoted below and published as such in the Delegated Regulation 2017/389³⁴:

Type of fail	Rate
1. Settlement fail due to a lack of shares that have a liquid market within the meaning of point (b) of Article 2(1)(17) of Regulation (EU) No 600/2014, excluding shares referred to in point 3	1,0 basis point
2. Settlement fail due to a lack of shares that do not have a liquid market within the meaning of point (b) of Article 2(1)(17) of Regulation (EU) No 600/2014, excluding shares referred to in point 3	0,5 basis point
3. Settlement fail due to a lack of financial instruments traded on SME growth markets , excluding debt instruments referred to in point 6	0,25 basis point
4. Settlement fail due to a lack of debt instruments issued or guaranteed by: <ul style="list-style-type: none"> (a) a sovereign issuer as defined in Article 4(1)(60) of Directive 2014/65/EU; (b) a third country sovereign issuer; (c) a local government authority; (d) a central bank; (e) any multilateral development bank referred to in the second subparagraph of Article 117(1) and in Article 117(2) of Regulation (EU) No 575/2013 of the European Parliament and of the Council⁽¹⁾; (f) the European Financial Stability Facility or the European Stability Mechanism. 	0,10 basis point

³⁴ European Commission Delegated Regulation (EU) 2017/389, of 11 November 2016, supplementing Regulation (EU) No 909/2014 of the European Parliament and of the Council as regards the parameters for the calculation of cash penalties for settlement fails and the operations of CSDs in host Member States. Published at: http://eur-lex.europa.eu/eli/reg_del/2017/389/oj. When applicable, updates will be proposed and published by ESMA.

5. Settlement fail due to a lack of debt instruments other than those referred to in points 4 and 6	0,20 basis point
6. Settlement fail due to a lack of debt instruments traded on SME growth markets	0,15 basis point
7. Settlement fail due to a lack of all other financial instruments not covered in points 1 to 6	0,5 basis point
8. Settlement fail due to a lack of cash	Official interest rate for overnight credit charged by the central bank issuing the settlement currency with a floor of 0 (zero) ³⁵

5.7 CENTRAL BANK DISCOUNT RATE (PENALTIES DUE TO LACK OF CASH)

CSDs must source the relevant interest rate for the currency of the failing settlement instruction in case the fail reason is ‘lack of cash’.

The cash discount rate is the official interest rate of the central bank issuing the settlement currency that should evidence the borrowing costs for that currency.

For EUR, this is the ‘marginal lending facility rate’ which is published on the ECB website³⁶.

[ESMA to officially confirm:] For penalties calculations, the annual cash discount rate shall be divided by 360 days in order to generate the applicable daily penalty rate.

Discount rates in percentages shall be reported up to ten digits after the comma; the rounding rule RE11 ‘Rule for cash discount penalty rates’ as defined in the ‘ECSDA Penalties Reference Data Rules & Recommendations’ (see Annex VII of the Framework) applies, i.e. rounding to the next higher digit when the 11th digit’s value is five or higher.

Example: annual rate for DKK is 0.05% - daily rate in % is $0.05/360 = 0.000138888889\%$ → daily penalty rate is: 0.0001388889%.

In the absence of a common definition of the CSDR legal text term ‘discount rate’, ECSDA defined a table describing for each currency which Central Bank rate concretely shall be used by CSDs for penalties calculation purposes:

³⁵ As this is an annual rate, a conversion to a ‘daily rate’ (by dividing the rate by 360 days) shall be applied for penalties the calculations (see chapter 5.7).

³⁶ Discount rates would be updated by the corresponding to the currency EU Central Banks. For the ECB rates, please see http://www.ecb.europa.eu/stats/policy_and_exchange_rates/key_ecb_interest_rates/html/index.en.html

For DKK, the ‘proxy’ rate to be used as defined by the Danish National Bank and the Danish regulator (FSA) in November 2020 is displayed.

Currencies Discount
Rates_Update_151220

[Link to the document](#)

Note: while updates/ changes of the applicable rates for EU/ EEA and major global (USD, JPY, GBP) currencies that are offered by (I)CSDs to be used for DVP settlement shall be considered upon occurrence, the update frequency may be different for non-frequent for European CSDs currencies. This is mainly relevant for ICSDs and yet subject to their internal analysis.

5.8 FOREIGN EXCHANGE RATES (FX)

For non-EUR currencies, the relevant Central Banks’ Foreign exchange (FX) rates shall be consulted.

As explained in chapter 6, for FOP instructions related penalties, an FX conversion to another currency may be required.

CSDs must then source the relevant FX rate for the relevant currency of the failing settlement instruction (for EUR, various FX rates are published by ECB on their website³⁷; in case FX rates are missing or other cross-rates (e.g. SEK/ DKK) are needed, these must be sourced by CSDs preferably from the respective National Central Bank issuing the currency).

Foreign exchange rates applied will not be reported in the daily and monthly reporting.

³⁷ <http://www.ecb.europa.eu/stats/exchange/eurofxref/html/index.en.html>

6 PENALTIES CURRENCIES CONVERSIONS NEEDS

This section suggests an approach for scenarios involving multiple CSDs when the currency of the reference price or cash penalty is calculated in a currency that is not eligible at the Calculating-CSD or Investor-CSD.

As it is the responsibility of the CSD being a participant in the Calculating-CSD to ensure the payment is executed towards the Calculating-CSD in the currency as reported, the handling of a potential cash conversion is ultimately left to the discretion of the Investor-CSD.

An issue related to the penalties collection/ redistribution due to divergent currencies can materialise only in a free of payment³⁸ settlement fails scenario where the penalty currency applied by the Calculating-CSD is not eligible in the Investor-CSD(s) or settlement platform (e.g. the T2S settlement platform). CSDs may in such cases require payments to be arranged by their participants to/ via payment banks.

Generally, the instrument reference price currency shall be applied by the Calculating-CSD, i.e. the amount imposed by the penalty shall be calculated in one of the following ways:

- either in the currency of:
 - i. the underlying security if the instrument is quoted in nominal or percent (usually fixed income instruments); or
 - ii. the daily reference price if the underlying security is quoted in units (usually shares);or
- in a default currency as defined by and eligible for settlement in the Calculating-CSD.

If a currency is not eligible at the Calculating-CSD (i.e. settlement or cash accounts in the reported currency are not available for participants), unless CSDs require payments to be arranged by their participants to/ via payment banks, a currency conversion process shall apply by the Calculating-CSD (using a default currency to be defined by the CSD) as follows:

1. It calculates the penalty in the currency of the reference price;
2. It converts the daily penalty amount into the CSD's default currency and rounds the amount up at least to the first two decimals;
3. It reports the (converted) penalty amount **in the currency actually to be credited/ debited** in the daily penalty reporting, per CSD, currency, and counterparty.

³⁸ For against payment transactions, by definition, the settlement currency must be eligible in all CSDs involved in the settlement; this applies for intra- and cross-CSD settlements. In case the reference price is deviating from the currency of the cash leg, conversion into the settlement currency must be applied by the penalties Calculating-CSD. In case of fails due to lack of cash, the penalty amount shall always be calculated in the currency of the cash leg.

The Calculating-CSD subsequently only reflects the converted currency amount in its monthly reports (and payment pre-advice, if applicable).

No cash is actually to be exchanged on a daily basis, but payments are only made once a month.

Cross-CSD settlement fails

In case the Investor-CSD does not offer cash accounts/ settlement in the currency applied by the Calculating-CSD, the Calculating-CSD may be paid by the Investor-CSD (or the Investor-CSD by its underlying participants) via a payment bank.

As described before, the penalty currency(ies) to be processed is defined by the Calculating-CSD. Subsequently, Investor-CSDs should, if possible, collect from/ pay to their underlying clients in the currency as reported by the Calculating-CSD in order to avoid that FX exposures or cash imbalances occur on the level of the Investor-CSDs.

After receipt from the Calculating-CSD, the Investor-CSD reports the penalties further to its underlying participants and secures the collection/ redistribution of the penalty amounts on a monthly basis, if possible, in each currency as reported by the Calculating-CSD. Hence, the Investor-CSD(s) being participants of the Calculating-CSD, shall provide the following reporting in the currency(ies) as applied by the Calculating-CSD:

1. Daily reporting of penalties;
2. Monthly aggregated reporting of penalties over the calculation period per currency and party;
3. Aggregated amounts to be collected/ redistributed per currency and party.

Intra-CSD settlement fails

In an intra-CSD context, no FX issues should occur. The currency to be used for the penalties is at the discretion of the Calculating-CSD. For DVP instructions, the currency of the cash leg should be applied (see chapter 5.2).

7 CALCULATION METHODS OF THE CASH PENALTIES

As also described in chapter 9, the (obligation for the) calculation of penalties depends on the settlement platform:

- For T2S, as the T2S penalty mechanism knows both, the receipt and delivery leg of the transaction, the involved CSDs can rely on T2S to calculate the penalties.
- For intra-CSD settlements outside T2S, the CSD on whose platform settlement takes place is calculating the penalties.
- For non-T2S cross-CSD settlements, the (Issuer-)CSD where the ultimate settlement takes place calculates the penalties for both legs of the transaction.

For Bridge settlement, the delivering (I)CSD performs the calculation. Note: in relation to chapters 7.3 and 7.4, the term ‘party’ refers to ‘T2S party BIC’ (where the T2S settlement platform is calculating the penalties. The term ‘CSD-link’ refers to settlement fails outside T2S (i.e. the Issuer-CSD is the Calculating-CSD).

As a general rule, all penalty amounts shall be rounded up by CSDs at least to the first two decimals.

Note re. partially successful buy-ins and LMFP:

CSDR RTS Article 16.3³⁹ (referring to Art. 27.10 (c), 29.11 (b) and 31.11 (b)) stipulates that cash penalties shall apply to new settlement instructions that are representing the remaining (i.e. not bought-in) part of the failing transaction only as of the date of entry into the CSD system but not from the ISD of that instruction.

In order for CSDs to be able to comply with this requirement, the relevant CSD participants (including CCPs) should apply a market practice in such instances, requesting them to provide a specific qualifier in their settlement instructions; otherwise, CSDs cannot ensure the avoidance of LMFP calculations on an automated basis:

- MT54x/ ISO15022: sequence E ‘Settlement Details’ must contain field 22F:: STCO/REGL/BSSP.
- sese/ ISO20022 (e.g. T2S): code ‘BSSP’ to be used, see T2S CR717 and 728 for details.

Important note: only when these values are present on both, the receipt and delivery instruction, LMFP would not be applied under this exemption rule.

Alternatively, CSD participants may adapt the ISD for such new instructions to a later date to avoid LMFP.

³⁹ “(...) Where new settlement instructions are entered into the securities settlement system for any non-delivered financial instruments in accordance with Article 27(10), Article 29(11) or Article 31(11) [these Articles refer to partial buy-ins], cash penalties shall apply to the new settlement instructions from the day those instructions are entered into the securities settlement system.”

Example

- Party A has a delivery to Party B for 300 shares that fails for 4 days (SEFP and LMFP, if instructed after ISD, is applied)
- On ISD+4, a buy-in is initiated by Party B with Buy-in Agent C. The buy-in is only successful for 200 shares, the subsequent delivery from Party C to Party B settles on ISD. (If the buy-in settlement instruction was instructed or settled after ISD, SEFP and LMFP will be applied as normal).
- Upon settlement of the 200 shares, the initially failing instruction of 300 shares between Party A and Party B should be cancelled by both parties.
- Additionally, unless cash compensation is applied, the remaining 100 shares need to be instructed by both parties A and B for matching and settlement, normally using the ISD of the original instruction and containing the respective 'BSSP' coding for the CSDs to be able to apply the 'exceptional instruction entry date' rule not to apply LFMP.

7.1 SETTLEMENT FAIL PENALTY (SEFP)

Once a failing settlement instruction has been identified as subject to the computation of SEFP according to the detection rules described in chapter 3 and it was determined that a penalty is imposed (refer to chapter 4), the CSD can calculate the penalty to be applied.

The amount imposed by the penalty must be calculated depending on:

- i. the type of transaction formed by the two matched settlement instructions using reference data,
- ii. penalty rate of the ISIN or discount rate (Central Bank interest rate on cash) for the financial instrument exchanged by the transaction and
- iii. whether the instruments need to be delivered or received by the counterparty.

It is to be noted that:

- When a settlement fail reason 'lack of securities' has been identified by the CSD, no additional fail check for a 'lack of cash' shall be made by the CSD.
- or currencies aspects, please refer to chapters 7.3 and 7.4 for various calculation examples.

The following table summarises the basis for calculating the penalty amount for each type of transaction:

Type of transaction	SEFP
- Delivering versus Payment (DVP) - Delivering Free of Payment (DFP) - Receiving Free of Payment (RFP)	Penalty based on the quantity of securities failed to be delivered and Security penalty rate of the relevant asset type ⁴⁰ .
- Receiving versus Payment (RVP)	Penalty based on the quantity of securities failed to be delivered and the discount rate of the relevant currency.
- Debiting Payment Free of Delivery (DPFOD) - Crediting Payment Free of Delivery (CPFOD)	Penalty based on the amount of cash failed to be delivered and the discount rate of the relevant currency.
- Delivering with Payment (DWP) - Receiving with Payment (RWP)	Penalty will be the sum of: - Penalty based on the quantity of securities failed to be delivered and Security penalty rate of the relevant asset type; and - Penalty based on the amount of cash failed to be delivered and the discount rate of the currency.

If a fail is due to an instruction that is put 'on hold', such instruction is to be considered as the failing one, and the above-mentioned formulas have to be applied.

The formulas to calculate the penalty imposed by a Settlement Fail Penalty (SEFP) are the following:

▪ **i. For a failing DVP, DFP or RFP Settlement Instruction (including when 'on hold'):**

$$\text{SEFP} = \text{Security Penalty Rate} * \text{Reference Price} * \text{Quantity}$$

- **Security Penalty Rate** is the penalty rate stored in Static Data for the relevant asset type (derived from the ISIN and Place of trade) and the business day for which the penalty is calculated;
- **Reference Price** is the price stored in static data for the ISIN of the instruction and the business day for which the penalty is calculated;
- **Quantity** is the quantity of securities failed to be delivered, which is the quantity of the instruction remaining to be settled at the time of the end of processing of the relevant cut-off.

▪ **ii. For a failing RVP Settlement Instruction (including when 'on hold'):**

$$\text{SEFP} = \text{Cash Discount Penalty Rate} * \text{Reference Price} * \text{Quantity}$$

⁴⁰ Penalty rate as determined in the relevant ESMA Delegated Act.

- **Cash Discount Penalty Rate** is the discount rate of the relevant currency stored in Static Data divided by 360 and the business day for which the penalty is calculated.
 - **Reference Price** is the price stored in Static Data for the ISIN of the instruction and the business day for which the penalty is calculated.
 - **Quantity** is the quantity of securities failed to be delivered, which is the quantity of the instruction remaining to be settled at the time of end of processing of the relevant cut-off.
- **iii. For a failing DPFOD or CPFOD Settlement Instruction (including when ‘on hold’):**
- SEFP = Cash Discount Penalty Rate*Amount
- **Cash Discount Penalty Rate** is the discount rate of the relevant currency stored in Static Data divided by 360 and the business day for which the penalty is calculated.
 - **Amount** is the cash amount failed to be delivered, which is the amount of the instruction remaining to be settled at the time of end of processing of the relevant cut-off⁴¹.
- **iv. For a failing DWP or RWP Settlement Instruction (including when ‘on hold’):**
- SEFP = Security Penalty Rate* Reference Price* Quantity + Cash Discount Penalty Rate* Amount
- Security Penalty Rate*Reference Price*Quantity as described in (i);
 - Cash Discount Penalty Rate* Amount as described in (iii).

The penalties amounts might be reported with various decimals, but the monthly payment amounts shall be rounded up at least to the first two decimals.

The penalties calculated should be retained for 3 months.

7.2 LATE MATCHING FAIL PENALTY (LMFP)

For settlement instructions that are matched in the CSD system only after the relevant cut-off of their Intended Settlement Date (ISD), penalties shall be calculated only once (i.e. on the business day when they are matched) but considering all the previous business days where the instruction failed to settle due to the late matching⁴².

⁴¹ Rationale: Although the CSDR prescribes to use the security quantity and reference price for the calculation of all settlement fail penalties, for DPFOD and CPFOD settlement instructions where the ISIN quantity is zero, the assumption (ESMA to confirm) is to use the cash amount to compute the penalty. Please note the special handling in case of partially successful buy-ins as described in the Framework chapter 7.

⁴² Amendments could still be performed on these LMFP, in case of reference data updates for instance.

Settlement Fail Penalties (SEFP) and Late Matching Fail Penalties (LMFP) shall follow the same principles for their computation.

7.2.1 Number of days considered in the computation of LMFP

The number of days to consider in the formula to calculate the amount imposed by a Late Matching Fail Penalty (LMFP) will differ depending on whether the instruction subject to LMFP can either still settle, or no longer settle, on the business day when the instruction is matched (i.e. depending on whether it is matched before or after the relevant cut-off for the Matching Business Day).

1. When the instruction can still settle on the business day when it is matched:

- This scenario relates to those instructions matched after their ISD (late matching) but matched at a point in time when it is still possible to settle them on the business day when they are matched (i.e. matched before the relevant cut-off for Matching Business day).
- The LMFP shall be calculated for each business day as from the ISD until and excluding, the business day when the instruction is matched.
- In case the instruction does not settle on the business day when it is matched (even if it was possible because it arrived before the cut-off) then, a separate calculation will have to be performed for an additional SEFP.

The matching date is excluded from the LMFP and included in the SEFP.

2. When the instruction can no longer settle on the business day when it is matched:

- This scenario relates to those instructions matched, on or after the ISD, at a point in time when it is not possible to settle them on the business day when they are matched because it is after the relevant cut-off.
- The LMFP shall be calculated for each business day as from the ISD until, and including, the business day when the instruction is matched.

The matching date is included in the LMFP and excluded from the SEFP.

7.2.2 Formulas to be used

Note: Everything will be the same as for instructions that can still settle but, additionally, the business day when the instructions are matched must be included.

i. For a DVP, DFP or RFP received late:

$$\text{LMFP} = \text{Security Penalty Rate} * \text{Reference Price} * \text{Quantity}$$

- **Security Penalty Rate** is the penalty rate stored in Static Data for the relevant asset type (derived from the ISIN and Place of trade) and for the relevant business day.
- **Reference Price** is the price stored in Static Data for the ISIN of the instruction and for the relevant business day.
- **Quantity** is the quantity of securities failed to be delivered, which is the matched quantity of the Settlement Instruction.

ii. For an RVP received late:

$$\text{LMFP} = \text{Cash Discount Penalty Rate} * \text{Reference Price} * \text{Quantity, where};$$

- **Cash Discount Penalty Rate** is the discount rate of the relevant currency stored in Static Data divided by 360 and the business day for which the penalty is calculated;
- **Reference Price** is the price stored in Static Data for the ISIN of the instruction and the relevant business day.
- **Quantity** is the quantity of securities failed to be delivered, which is the matched quantity of the instruction.

iii. For an RVP received late and as an already matched instruction:

$$\text{LMFP} = \text{Security Penalty Rate} * \text{Reference Price} * \text{Quantity, where:}$$

- **Security Penalty Rate** is the penalty rate stored in Static Data for the relevant asset type (derived from the ISIN and Place of trade) and for the relevant business day;
- **Reference Price** is the price stored in Static Data for the ISIN of the instruction and the relevant business day;

- **Quantity** is the quantity of securities failed to be delivered, which is the matched quantity of the instruction.

iv. For a DPFOD or CPFOD received late (ISIN quantity is 0):

- LMFP = Cash Discount Penalty Rate * Amount;
- **Cash Discount Penalty Rate** is the discount rate of the relevant currency stored in Static Data divided by 360 for the relevant business day;
- **Amount** is the cash amount failed to be delivered, which is the matched cash amount of the Settlement Instruction.

v. For a DWP or RWP received late:

- LMFP = Security Penalty Rate * Reference Price * Quantity + Cash Discount Penalty Rate * Amount;
- Security Penalty Rate * Reference Price * Quantity as described in (i);
- Cash Discount Penalty Rate * Amount as described in (iv).

Note: the penalties calculated should be retained for 3 months.

7.3 DAILY BILATERAL NET PER COUNTERPARTY

In addition to the gross penalties calculated on a daily basis, a bilateral net amount per CSDlink; (only relevant for cross-CSD fails with non T2S CSDs), per currency and counterparty must be provided.

For each relevant business day, a net amount is calculated for the party against each of its counterparties.

Thus, for a given party, the bilateral net amount (due or entitled) against a given counterparty is:

- The sum of all the penalties (SEFP + LMFP) calculated at the failed instruction level that this party is entitled to receive (reported as credit) from a given counterparty (i.e. to be paid by this counterpart) in a CSD;

minus

- The sum of all the penalties (SEFP + LMFP) calculated at the failed instruction level that are imposed to the party (reported as debit) and to be paid to the same counterparty in the same CSD.

Three scenarios apply:

1. Intra CSD scenario⁴³: daily bilateral net with each counterparty in this CSD (at party level).
2. Cross-CSD scenario (T2S CSDs): daily bilateral net with each T2S CSD (at party level).

⁴³ This scenario covers as well parties/ participants at the Issuer-CSD that are CSDs.

3. Cross-CSD scenario (**non T2S CSDs**): daily bilateral net per CSD-link (CSD level).

If the result of the calculation is a positive amount, the bilateral net amount will be a credit for the party (i.e. an amount entitled from the counterparty); if the result is a negative amount, the bilateral net amount will be a debit (i.e. an amount due to the counterparty).

Note: No netting is to be performed across CSDs and currencies, i.e. a net by CSD-link, currency and counterparty must be applied.

7.4 MONTHLY CASH PENALTIES AGGREGATION AND GLOBAL NET AMOUNTS

7.4.1 Monthly bilateral net per counterparty

On the 14th PBD of the month, bilateral net amounts of the penalties computed for all the business days of the previous month are calculated per CSD, currency, and party against each of its counterparties.

When calculating the monthly aggregated amounts, the CSD will consider the last available value of the amount of each penalty aggregated (i.e. the CSD will take into account all the modifications performed until the end of the penalties appeal period for CSDs, i.e. changes until and including the 11th PBD of the following month).

This **aggregation** of the monthly penalties per CSD-link, currency and counterparty (i.e. bilateral net amounts) allows to:

- Isolate the amounts of the CCPs that shall not be collected and redistributed by the CSD;
- Isolate non-payments from CSD participants (i.e. participants affected by a non-payment of its counterpart as well as the amount that cannot be distributed by the CSD since it was not collected could be easily identified);
- Provide a netting as required by the CSDR;
- Reduce the required liquidity.

Accordingly, for each **party/ CSD-link**, currency and counterparty, the monthly bilateral net amount equals to:

- The sum of all the cash penalties of the previous month in the relevant currency, that the party is entitled to receive (reported as credit) from a given counterparty (i.e. to be paid by this counterparty);

Minus

- The sum of all the cash penalties of the previous month in the relevant currency and that were imposed to the party (reported as debit), and to be paid to the same counterparty.

Subsequently, for each **party/ CSD-link**, a bilateral 'net amount per counterparty' is calculated.

Three scenarios apply:

1. Intra CSD scenario⁴⁴: monthly bilateral net with each counterparty in this CSD (at party level).
2. Cross-CSD scenario (T2S CSDs): monthly bilateral net with each counterparty T2S CSD (at party level).
3. Cross-CSD scenario (non T2S CSDs): monthly bilateral net per CSD-link (CSD participant level).

If the result is a positive amount, the bilateral net amount will be a credit for the party (i.e. an amount entitled to be received from the counterparty); if the result is a negative amount, the bilateral net amount will be a debit (i.e. an amount due to the counterparty).

7.4.2 Global Net (monthly amount to be paid or to be received)

“For each CSD, currency and party, the monthly net amount equals to:

- The sum of all the net bilateral amounts in the relevant currency, that the party is entitled to receive (reported as credit and for all counterparties);

Minus

- The sum of all the net bilateral amounts in the relevant currency and that were imposed to the party (reported as debit and for all counterparties).

The total of the bilateral nets will result in:

- a global net per CSD (for intra CSD and cross CSD with T2S-in CSDs scenarios). For instance, a global net between CSD A and CSD B, and/ or
- a global net per CSD-link (for cross-CSD with non T2S CSDs scenario). For instance, a global net between a) CSD B and CSD A where CSD B is the actual place of settlement, and b) between CSD B and CSD A where CSD A is the actual place of settlement.

The ‘global net’ amount resulting from this calculation and will either be an amount due by the party (i.e. to be paid by the party), or an amount to be received by the party.

This amount will either be reported via the monthly report, a payment pre-advice or through PFOD instructions (the process depends on the CSD payment process and the CSD settlement platform) to the CSD participants. Please refer to chapter 11.3.3 for details.

CCP-transactions:

As per CSDR SDR RTS Article 19, relevant cleared settlement transactions will be reported by the CSD but will be excluded from the actual cash collection/ redistribution process.

See chapter 12.3 for details.

⁴⁴ This scenario covers as well participants at the Issuer-CSD that are also CSDs (i.e. Investor-CSDs).

8 CHANGES TO PREVIOUSLY CALCULATED PENALTIES

Updates of previous penalty calculations shall be done by the CSD as soon as the reference data becomes available to the CSD and considering the appeal period.

The latest point in time for consideration of new (or updated) reference data by the CSD shall be the 11th PBD of the following month. That means if new or updated data for calculating penalties are available to the CSD only after the 11th PBD, no retroactive penalties calculations or adaptations should be made by CSDs.

Note that, in addition to the following penalties changes activities steps, T2S foresees a ‘switch’ mechanism⁴⁵; as this is not considered being relevant for non-T2S settlements it is not covered in this Framework.

8.1 REMOVAL OF EXISTING PENALTIES

In the circumstances described in chapters 2.1.4 and 2.2.4 (‘Monthly Appeal Period’), CSDs may remove an already computed and reported penalty (i.e. set the penalty amount to ‘zero’) latest until (and including) the 11th PBD of the following month.

When the removal of a penalty is performed, the CSD shall use a standard to specify the reason for the removal (see Framework Annex II, item 4 ‘Penalties adjustments reason codes’ for details). Such removals would need to be communicated to the National Competent Authorities.

The CSD shall also report the removal of a penalty in the relevant Daily Report:

- On the business day following the removal of the penalty, the CSD shall report the removal, either in the Daily Report (with the penalties computed for the previous day) or in the report of modified penalties.
- Within this report, the penalties that have been set to zero will be reported with:
 - New amount equal to zero;
 - Status ‘Removed’;
 - The standard removal reason code (see SWIFT SMPG Market Practice in Annex II, item 4); and

⁴⁵ Switch between the failing and non-failing party of a cash penalty: this functionality caters inter alia for cases where a transaction is settled on multiple platforms, i.e. where settlement on T2S depends on the fulfilment of a condition outside T2S. For example, when cash settlement takes place outside T2S while the settlement of securities takes place in T2S, conditional securities deliveries (CoSD) may be used by T2S Actors to block the securities in T2S until cash settlement takes place on the relevant platform. Depending on the CoSD configuration and the business scenario, T2S could compute and assign the penalty to the incorrect party (i.e. to the delivering instead of to the receiving participant or vice versa), e.g. because the free-of-payment delivery in T2S is failing, while as it is due to the lack of cash of the counterparty on the external cash settlement platform. Hence, in order to allow the CSD to make the required ex-post correction, the CSD shall be able to swap the failing party and the non-failing party of the cash penalty.

- Optionally, a further description (free text) of the reason for the removal (provided by the CSD).

8.2 RE-INCLUSION OF A PREVIOUSLY REMOVED PENALTY

CSDs may re-include already removed penalties as from when e.g. updated information becomes known to the CSD and latest until (and including) the 11th PBD of the following month.

When a penalty is re-included, CSDs shall calculate the penalty amount again as it may have changed due to updates in the reference data since it was removed. This recalculation shall be performed by the CSD in its next daily recalculation process⁴⁶.

CSDs shall report the re-inclusion (penalty with status 'active') to both, the failing and the non-failing parties.

On the following business day after the re-inclusion of the penalty, the CSD shall report the re-inclusion, either in the Daily Report (with the penalties computed for the previous day), or in the report of modified penalties:

- Status 'Active'; and
- The standard reintroduction reason code (see SWIFT SMPG Market Practice in Annex II, item 4).

8.3 RE-ALLOCATION OF AN EXISTING PENALTY

CSDs may re-allocate penalties, e.g. for an LMFP (Late Matching Fail Penalty), when the penalised party is not the real defaulting one (i.e. need to re-allocate the penalty from the instructing party to the delivering or receiving party, or from the delivering party to the receiving one).

The CSD shall re-calculate the amount of the penalty (because a different formula for calculating the penalty may apply, or due to changes in the reference data).

On the following business day after the re-allocation of the penalty, the CSD shall provide either the Daily Report (with the penalties computed for the previous day) or the report of modified penalties, including the following information:

- For the initially penalised party and its counterparty:
 - Status 'Removed';
 - A reason code to reflect the re-allocation (see SWIFT SMPG Market Practice in Annex II, item 4); and

⁴⁶ For T2S-in CSDs, the amount of the cash penalty, as it was when the penalty was removed, is reported by T2S; this amount may change afterwards due to a subsequent recalculation by T2S (penalty is considered as 'to be recalculated after being modified').

- Optionally, a description (free text) of the reason for the re-allocation (provided by the CSD).
- For the ‘newly’ penalised party and its counterparty:
 - Status ‘Active’;
 - A reason code to reflect the re-allocation (see SWIFT SMPG Market Practice in Annex II, item 4);
 - Optionally a description (free text) of the reason for the re-allocation (provided by the CSD); and
 - A reference of the original penalty that has been re-allocated.

8.4 UPDATE OF EXISTING PENALTIES

Upon changes of values of the attributes of the securities subject to penalties (e.g. the reference price of the financial instrument), CSDs shall recalculate affected penalties (i.e. those that used the modified reference data in their calculation) and update the penalty in case their details have changed, for example, if there is a new amount due/ entitled to receive.

CSDs shall recalculate and update a penalty after changes in the related reference data as from the date when the updated information is known and latest until (and including) the 12th PBD of the following month. On the following day, after the recalculation of a penalty, CSDs shall provide either the Daily Report (with the penalties computed for the previous day), or the report of modified penalties, including:

- New updated amount and values; and
- Reason code ‘Updated’.

9 CROSS-CSD SETTLEMENT FAILS

9.1 BACKGROUND

The settlement fails scenarios listed in this section have been discussed with ESMA and informally approved.

The following scenarios consider whether or not a CSD in the settlement chain is actually subject to CSDR and also illustrate which CSD is responsible for the calculation, reporting and/ or collection/ redistribution of penalty amounts, including when CSDs settle via the T2S platform.

Generally, the scenarios apply an ‘actual place of settlement’ concept, i.e. only the CSD where matching and settlement is ultimately taking place (i.e. where settlement finality is reached) is responsible for calculating the penalties (the ‘Calculating-CSD’) and report them to its underlying participants (that may as well be CSDs) for processing.

Note for T2S: there is no Calculating-CSD as the T2S settlement platform is the relevant penalties calculating system. T2S CSDs send the daily and monthly penalties reports to their participants based on the information received from the T2S penalties system.

Relying on the Calculating-CSD avoids that CSDs are calculating penalties in parallel (which anyway is not always feasible, as e.g. late matching information is only available to the settling CSD), possibly leading to deviating results (e.g. due to different reference prices) and reconciliation needs⁴⁷.

Based on the Calculating-CSD’s input, all its participants need to ensure the actual timely collection and redistribution of the monthly penalty amounts⁴⁸ is triggered. Investor CSD(s) is/ are responsible for the full collection and timely payment of the penalty amounts to the Calculating-CSD.

In essence, the CSDR penalties must be applied by all involved CSDs whenever the ultimate matching and settlement is taking place in a CSD that is subject to CSDR (and if the underlying instrument and transaction are actually subject to the penalties regime), and in compliance with the CSD’s Terms and Conditions that bind all participants of that CSD, including when they are themselves CSDs (in or outside CSDR reach), as it is the case for CSD-direct links.

In the case of a purely intra-CSD (i.e. CSD-internal settlement), the actual penalties application depends on whether or not the CSD itself is subject to CSDR or equivalent legislation.

⁴⁷ This approach is the same as today for those markets where penalties already apply.

⁴⁸ Note for T2S external settlement, T2S will (until further notice) calculate penalties in any case. T2S CSDs will replace these penalties by the ones reported by the Calculating-CSD (see as well chapter 2.2.1).

9.2 SCENARIO 1A

Due to its single settlement platform, T2S is able to calculate penalties for both legs of the T2S transaction.

9.3 SCENARIO 1B

Only the Issuer-CSD (being the Calculating-CSD) receives both legs of the transaction, allowing it to calculate the ultimate penalties.

Note regarding T2S: Due to the current T2S design, even for the single T2S leg, penalties will be calculated by T2S. T2S CSDs will replace these penalties with the ones reported by the Calculating-CSD (see as well chapter 2.2.1).

9.4 SCENARIO 1C

ASSESSMENT OF SCENARIO FOR PENALTIES CALCULATION, REPORTING AND COLLECTION OBLIGATION

1C

T2S will calculate both as an investor and issuer CSD

Due to its single settlement platform, T2S is able to calculate penalties for both legs of the T2S transaction.

9.5 SCENARIO 2A

ASSESSMENT OF SCENARIO FOR PENALTIES CALCULATION, REPORTING AND COLLECTION OBLIGATION

2A

T2S will calculate both as an investor and issuer CSD

Due to its single settlement platform, T2S is able to calculate penalties for both legs of the T2S transaction.

9.6 SCENARIO 2B

Only the Issuer-CSD (being the Calculating-CSD) receives both legs of the transaction.

For the T2S-in CSDs, due to the current T2S design, even for the single T2S leg, penalties will be calculated by T2S. T2S-in CSDs will replace these penalties with the ones reported by the Calculating-CSD (see as well as chapter 2.2.1).

9.7 SCENARIO 2C

Due to its single settlement platform, T2S is able to calculate penalties for both legs of the T2S transaction.

9.8 SCENARIO 2D

Only the Issuer-CSD (being the Calculating-CSD) receives both legs of the transaction, allowing it to calculate the ultimate penalties.

For the T2S-in CSDs, due to the current T2S design, even for the T2S legs, penalties will be calculated by T2S. T2S CSDs will replace these penalties with the ones reported by the Calculating-CSD (see as well as chapter 2.2.1).

9.9 SCENARIO 2E

Due to its single settlement platform, T2S is able to calculate penalties for both legs of the T2S transaction.

9.10 SCENARIO 2F

Only the Issuer-CSD (being the Calculating-CSD) receives both legs of the transaction, allowing it to calculate the ultimate penalties.

9.11 SCENARIO 2X (NEW)

CSD 2 (e.g. CBF, Euroclear France) is Investor CSD for the Issuer CSD (e.g. CBL, Euroclear Bank) and at the same time technical Issuer for CSD 1 in the same ISIN. Investor CSD 1 participant is delivering to the Issuer CSD Participant.

Only the Issuer-CSD (being the Calculating-CSD) receives both legs of the transaction, allowing it to calculate the ultimate penalties.

Assumptions:

Step 1: Issuer CSD reports penalties to the Investor CSD 2 (as the Issuer CSD has no relationship with Investor CSD 1)

Step 2: Investor CSD 2 reports penalties to the Investor CSD1

Collection and Redistribution follow the same steps.

9.12 SCENARIO BRIDGE

- Settlement taking place between both ICSDs, no movement in issuer CSD
- One ICSD to calculate penalties
- Both ICSDs to report penalties to their participants and regulators
- Both ICSDs to collect/distribute penalties from/to their participants

23

Note that the ICSDs' realignment transactions on the Issuer-CSD level are separately handled outside the Bridge settlement flow.

10 COLLECTION & REDISTRIBUTION OF PENALTIES (PAYMENT)

10.1 GENERAL OVERVIEW

‘Collection and redistribution of penalties’ refers to the actual exchange of penalties cash-amounts (i.e. the penalties payments; separate for every single currency in which penalties were calculated and reported by a CSD) resulting from the calculation process as described in chapter 7.

CSDs applying this Framework shall perform the actual ‘collection and redistribution’ of the applied penalties via the relevant payment process only once, in the following month on the 17th PBD (if the CSD and/ or the payment system of the currency is closed on the 17th PBD, the payment shall be done on the next possible business day).

CSDs, via their participants, shall collect/ redistribute the full amount of penalties on the 17th PBD of the month as described in chapter 2.

Regarding T2S, chapter 10.1.1 must be considered.

CSDs shall not take any financial or counterparty risks; in case participants fail to pay, the CSD itself will fail to pay further to its participants and potentially other CSDs that are expecting the cash. The CSD should inform its participants about payment delays but cannot be held liable for such delays caused by CSD participants.

WORKING ASSUMPTION (ESMA to confirm): To mitigate market impacts in case of delays in the payments collection or contingency, a CSD may redistribute the cash it has received on the 17th PBD to receiving participants, as well as other CSDs for cross-CSD penalties, already even when not all dues have been fully collected and apply a ‘partial redistribution’. In such case, the relevant receiving participants and CSDs must be paid the full amount expected by them and not only a portion (i.e. no ‘partial payments’ apply by the CSD).

CSDs shall segregate penalties cash flows in their own books from any other activities, hence, CSDs shall use a single (or may use several, e.g. in case of multiple links) dedicated penalties cash account(s).

In relation to their participants, CSDs will use by default the participants’ cash account linked to the settlement account (only if allowed by a CSD, a participant may assign a dedicated penalties cash account as long as this complies with the CSD’s payment process). Participants not yet having a cash account communicated to/ held at a CSD will be required to define one.

CSDs may use different models for the actual penalties payments processing:

1. CSD triggers direct debits⁴⁹ and/ or cash transfers;
2. CSD generates PFOD instructions (T2S model, see chapter 10.1.1);

⁴⁹ Note that ESMA was asked to acknowledge the risks related to CSDs not being allowed to perform direct debits in some EU countries and to consider appropriate mechanisms to enforce the timely payment of due amounts.

3. Cash transfer using a payment bank⁵⁰.

CSDs shall inform their participants of the applicable payment method(s).

CSDs may define appropriate measures (to be described in the relevant contractual documents with the CSD participants) to ensure penalty amounts due are available to the CSD and CSD participants comply with their payment obligations to the CSD on time to avoid delays and processing issues due to a lacking or incomplete penalties collection by the 17th PBD.

The process of collection and redistribution has to be managed in a phased approach to make sure CSDs do not pre-finance any payment. The overall payment process consists of the following phases:

1. Collection from the CSD participants (as well as receiving the subsequent payments from other CSDs) that are due to pay penalties;
2. Redistribution from a penalties receiving CSD to its participants.

All steps shall be performed completely on the 17th PBD for every currency involved. (Note: if the CSD and/ or the payment system of the currency is closed on the 17th PBD, the payment shall be done on the next possible business day).

As a result, penalties cash-related information must be transferred by all involved parties at least in a near-time mode as the use of end of day cash statements would not allow for the timely payment process completion by the involved parties including (I)CSDs and their agents (if applicable) in case of settlement chains.

Participants that are CSDs will be treated the same way as any other CSD-participant.

10.1.1 T2S-In CSDs payments processing⁵¹

In the context of ESMA RTS on Settlement Discipline Article 20 ('CSDs that use a common settlement infrastructure'), T2S-In CSDs agreed to commonly apply a PFOD payment process.

Participants shall fund their relevant T2S DCAs in time to ensure PFOD penalties can settle in the T2S night-time settlement cycle (NTS) for value 17th PBD to avoid payment delays.

T2S-In CSDs, via their participants, shall collect/ redistribute the full amount of penalties on the 17th PBD of the month as described in chapter 2 before cash redistributions are executed ('partial redistributions' should be limited e.g. to reduce cash balances on a CSD's own penalties cash account (including to comply with local regulations) or contingency situations. Pre-condition is that the full amount expected to be received by a single CSD or CSD participant can be paid (i.e. no 'partial payments' apply).

⁵⁰ Option 3 is least preferred by CSDs due to extended payment chains (via CCBs), increasing risk of delayed payments. However, for foreign currency transactions it may be the only feasible option.

⁵¹ Note that non-T2S CSDs may decide to apply a similar process and should apply the rules described in this chapter whenever possible and applicable.

Cross-CSD payments

For cross-CSDs payments, CSDs using the T2S settlement platform will commonly apply the PFOD method for settlement fail penalties payments reported by T2S resulting from T2S transactions and in T2S eligible currencies.

All (delivery and receipt) PFODs should be generated at the same time.

All T2S-In CSDs shall use a single dummy ISIN LU2128008567 (debt instrument, CFI code TRFMXX, i.e. qualified as Financial Instrument Type 'OTHR' as per Framework chapter 5.3⁵²).

No 'already matched' process applies, i.e. each CSD needs to instruct its own settlement leg on the 15th PBD to ensure timely matching.

PFOD criteria	
Transaction Type	PAIR
Trade Date	15th PBD of the following month
Intended Settlement Date	17th PBD of the following month ⁵³
Dummy ISIN code	LU2128008567
Partial Indicator	No partial allowed (NPAR in T2S platform)
Priority Indicator	Highest possible for the CSDs (for instance, 001 in T2S platform)
Modification Allowed	No for CSD participants that are not CSDs Yes for CSD participants that are CSDs ⁵⁴
Hold and Released	Released
Common reference	Not to be used
2 nd level matching	Dedicated or standard ⁵⁵ CSD penalty BIC
Matching status	To be matched
Delivery/ Receipt	<p>The CSD creating its leg of the PFOD is to be considered as the 'party':</p> <ul style="list-style-type: none"> - a CPFOD (PFOD-CRDT, crediting cash) will be used to collect cash on the CSD penalties cash account, thus being a debit for the counterparty CSD => collection - a DPFOD (PFOD-DBIT, debiting cash) will be used to distribute cash from the CSD penalties cash account, thus being a credit for the counterparty CSD => re-distribution <p>If the 'party' CSD has to receive a penalty amount → CPFOD for delivery (to credit the 'party' CSD DCA) If the 'party' CSD has to pay a penalty amount → DPFOD for receipt (to debit the 'party' CSD DCA)</p>

⁵²CSDs may apply blocking rules for their customers to avoid usage of the dummy ISIN.

⁵³ Or, if not corresponding to a T2S BD, the subsequent next T2S BD

⁵⁴ Investor-CSDs in an Issuer-CSD must be able to use the hold/ release functionality.

⁵⁵ Some CSDs may decide to use their 'standard' BIC code and link it to a dedicated penalty cash account (DCA), while others may decide to create a dedicated BIC code for penalties management.

Intra-CSD payments

For intra-CSD payments, unless communicated otherwise by a CSD, PFOD will be applied like for cross-CSD payments. However, the instructions will be generated by the CSD on behalf of its participants, as ‘already matched’, non-modifiable and should be ‘released’.

PFOD criteria	
Transaction Type	PAIR
Trade Date	15th PBD of the following month
Intended Settlement Date	17th PBD of the following month ⁵⁶
Dummy ISIN code	LU2128008567
Partial Indicator	No partial allowed (NPAR in T2S platform)
Priority Indicator	Highest possible for the CSDs (for instance, 001 in T2S platform)
Modification Allowed	No for CSD participants that are not CSDs Yes for CSD participants that are CSDs ⁵⁷
Hold and Released	Released
Common reference	Not to be used
2 nd level matching	Participant BIC code (linked to the default settlement cash account)
Matching status	Already matched
Delivery/ Receipt	As the transaction is already matched, both legs are created and matched by the CSD: - a CPFOD (PFOD-CRDT, crediting cash) will be used to collect cash on the CSD penalties cash account, thus being a debit for the CSD customer => collection - a DPFOD (PFOD-DBIT, debiting cash) will be used to distribute cash from the CSD penalties cash account, thus being a credit for the CSD customer => re-distribution

10.2 STEP 1: PENALTIES COLLECTION FROM CSD PARTICIPANTS

Participants must ensure their cash accounts are funded or dues paid to the dedicated CSD penalties cash account by the start of the CSD’s first settlement processing cycle on the 17th PBD but at latest 2 hours prior to the cut-off time of the relevant currency payment system; see as well chapter 2 for details.

CSDs due to pay penalties to another CSD shall do so upon (partial or full, pending ESMA advice) collection of the penalties from their participants.

Note that only one ‘global net’ amount for each ‘actual place of settlement CSD’ will be exchanged across CSDs, i.e. a CSD shall either pay to or receive penalties from another CSD as otherwise the payment process cannot be executed (‘lock’ situation where both CSDs would be waiting for the

⁵⁶ Or, if not corresponding to a T2S BD, the subsequent next T2S BD

⁵⁷ Investor-CSDs in an Issuer-CSD must be able to use the ‘hold/ release’ functionality.

other to pay as otherwise they cannot redistribute the penalties to the other CSD). See chapter 11 for details.

Regarding T2S, chapter 10.1.1 must also be considered.

No tolerance between the amount to be paid as reported by the CSD and the amount actually collected by the CSD is allowed, i.e. CSD participants must pay exactly the amount as calculated and reported by the CSD. Should the amount received by a CSD not represent the one expected, the CSD may not be able to perform the penalties redistribution to its participants (including other CSDs in a cross-CSD penalties scenario).

There are different mechanisms available to the CSDs on how to collect the penalties; depending on the payment model, the relevant cash account number information may need to be provided to participants and relevant other CSDs.

10.2.1 Payment via direct debits and/ or cash transfers

10.2.1.1 Direct debit

Whenever legally and/ or contractually allowed, the CSD may collect the penalties by directly debiting the relevant cash accounts of its participants. Such a process will avoid delays and differences in the amounts expected and collected by the CSD and subsequent blocking of the cash distribution process.

CSD participants must have adequately funded their cash account on time on the 17th PBD. In case the participant cash account is not sufficiently funded; the direct debit may lead to the consumption of granted credit lines or an account overdraft⁵⁸.

10.2.1.2 Cash transfer

In the case when a direct debit is not feasible, the CSD participants will have to actively transfer the amounts due to the dedicated cash account of the CSD by the start of the relevant currency payment system's processing cycle on the 17th PBD but at latest 2 hours prior the cut-off time of the payment system; see as well chapter 2 for details.

10.2.2 Payment via PFOD transactions

This process will be applied by T2S-In CSDs intra- and cross-CSD payments.

On the 15th PBD, but at the latest before the start of the 17th PBD, the CSD will create PFOD instructions to receive the cash amounts from its participants that have to pay penalties.

CSD participants must have adequately funded their relevant cash account in order for the PFOD to timely settle on the 17th PBD.

⁵⁸ If the cash account is owned by a (Investor-) CSD, it shall not go into negative, considering that CSDs have to first collect the cash from their own participants.

In the CSD's penalties collection process, the PFOD settlement will lead to a debit of the CSD participant's cash account (e.g. T2S DCA) and a credit of the CSD's penalties cash account.

Note: With the use of the PFOD instructions, the rules of the settlement platform will be applied (i.e. recycling, reporting or other relevant rules).

10.2.3 Payment via a payment bank

In some cases (and currencies), the penalties payment process may involve a third party acting as a payment bank for a CSD participant.

CSD participants, via their payment bank, must ensure the CSD's penalty account is credited latest on the 17th PBD of the month by 09:00 a.m. CET but latest 2 hours prior to the cut-off time of the relevant currency payment system.

10.3 STEP 2: PENALTIES REDISTRIBUTION FROM PENALTIES RECEIVING CSD TO ITS PARTICIPANTS

When the (full or partial) collection from the CSD participants (incl. other CSDs) was processed, the CSD shall initiate to redistribute the cash collected to its participants to clean the CSD's dedicated penalties cash account.

Three mechanisms are available for payments from the cash receiving CSD to its participants. Their choice is depending on the payment model, the relevant cash account number information may need to be provided to participants and relevant other CSDs.

10.3.1 Cash transfers

The CSD transfers the amounts due to the relevant cash accounts of its participants. Such credit shall take place only once the payments due have been (fully or partially, pending ESMA advice) collected on the 17th PBD.

10.3.2 Payment via PFOD transactions

This process will be applied at least by T2S-In CSDs for their intra- and cross-CSD payments.

On the 15th PBD, but at the latest before the start of the 17th PBD, the CSD will create PFOD instructions to deliver the cash amounts to its participants that shall be credited with penalties.

The intra-CSD PFOD instructions will be created as 'already matched' (if this functionality does exist in the CSD). Upon settlement, these PFODs will debit the CSD's dedicated penalties cash account and credit the CSD participants' relevant cash accounts.

Note: With the use of the PFOD instructions, the rules of the Settlement platform will be applied (i.e. recycling, reporting or other relevant rules).

10.3.3 Payment via a payment bank

CSDs may outsource the penalties payment process to a third party acting as a payment bank. Credits to the CSD participants will take place only if the payments due have been (fully or partially, pending ESMA advice) collected on the 17th PBD.

11 REPORTING

For the purpose of exchanging penalties information between CSDs and their participants (including those that are CSDs) in a Straight Through Processing fashion, penalties reports content and formats used by CSDs shall be harmonised. Such an approach will enable all involved parties to apply a common messaging and communication process, by using ISO reports for Application-to-Application (A2A) message exchanges.

This is especially relevant in the context of cross-CSD settlement and customers being participants of multiple CSDs.

Proprietary solutions to report penalties may be used by CSDs as additional (User-to-Application; U2A) communication means⁵⁹, for example to support participants' demand or address market-specific aspects.

This Framework section focuses on providing a high-level overview of the information to be provided in the respective messages and reports.

However, the final specifications will be agreed with and made available by the standards-setting organisations, like SWIFT.

It is recommended that the CSDs provide a 'global net amount' per counterparty CSD in their monthly reports on the 14th PBD. Otherwise, PFODs shall be generated by CSDs prior to the 17th PBD serving to timely notify the 'global net' amount to be debited from/ credited to the CSD participants.

As PFOD instructions and/ or the monthly penalties reports will contain the 'net amount' due to be paid or received by a participant, no dedicated payment pre-advice per currency will be issued by the CSDs.

In case of penalties removal, re-integration and/ or re-calculation, the net penalties per counterparty and currency provided in the previous daily reports will not be updated (recalculated) but reflected in the 'amended' penalties report; however, the penalty updates will be considered for the calculation of the monthly penalty amounts.

Please also refer to Annex VI for illustrative examples in relation to the daily and monthly reporting.

11.1 REPORTING FORMATS

CSDs should use either the ISO20022 and/ or ISO15022 messages, when available.

This section describes penalty reports, as well as subsequent cash payment-related messages.

⁵⁹ For the exceptional cases where a CSD may use other standards, please refer to the ESMA Questions and Answers to the CSDR on article 35, CSD Question 4 (a) under the conduct of business rules. The document can be found here: <https://www.esma.europa.eu/press-news/esma-news/esma-updates-csdr-qas-0>

11.1.1 ISO20022 messages

T2S/ 4CB is finalizing the design of the dedicated daily and monthly penalties ISO20022 customized T2S semt.044 messages. Once developed, the T2S message will also be made available outside T2S in addition to a general SWIFT version; CSDs are free to decide which version they use.

For the ISO20022 format, a Pillar III semt.044 message dedicated to penalty messaging will be used. The features of this message are as follows:

- It is a message dedicated to penalty reporting and its peculiarities (new information fields);
- It uses the most recent ISO standard in XML format;
- It will have hierarchical blocks, repetitive for every party. These repetitive party blocks will contain repetitive blocks for counterparties, with the specific penalties' information (report->party->counterparty->penalty). These repetitive blocks might ease the processing of reports further down the line as they will already contain the needed block of information; and
- The proposed message contains fields going beyond the potential group of mandatory fields and can possibly accommodate also optional and additional fields if needed.

The penalties amounts will contain a 'credit' (for amounts to be received by the CSD participant) or 'debit' (for amounts to be paid by the CSD participant) indicator.

11.1.2 ISO15022 messages

11.1.2.1 Penalties calculation reporting:

Based on the T2S ISO20022 messages content and structure, the existing ISO15022 messages MT537 and MT548⁶⁰ were adapted by SWIFT in November 2019 to cover penalties related information by introducing a 'PENA' sequence. However, the MT548 will only be usable for the reporting of daily penalties but not the monthly aggregated reporting.

The SWIFT SMPG provided a detailed market practice for the use of ISO 15022 MT537 and ISO 20022 semt.044 penalties messages (see Annex II, item 4 of this Framework document), i.e. no additional mapping (in case messages received in ISO20022 need to be processed in ISO15022 or vice versa) on message fields level will be provided by SWIFT.

The following development of the standard was agreed by the SWIFT SMPG:

- MT537 (Statement of transactions) and MT548 (Securities Settlement Status Advice) adaptations to contain a dedicated new 'PENA' sequence specific to the penalties reporting, in order to avoid any rejection of a 'standard' MT537 or MT548 received after the settlement of the transaction.

⁶⁰ The adapted MT message were made available in November 2019. Please refer to the SMPG, Standards MT Release November 2019, Settlement and Reconciliation; the following Change Requests relevant to the CSDR Settlement Discipline were implemented: CR 001449, CR 001446, CR 001463, CR 001447.

- The MT537/ 548 'PENA' messages will include new fields and repetitive blocks containing information such as:
 - late matching/ settlement fail;
 - reporting of underlying transaction;
 - penalty ID;
 - credit/debit indicators;
 - calculation parameter references.

The new fields will correspond to the new ISO20222 message in their content and level, although there might be alternative approaches to the content of some fields if the nature of the field requires it.

- The penalties amounts will contain an 'N' (debit) indicator for amounts to be paid by the CSD participant.

11.1.2.2 Penalties collection and redistribution (payments) reporting:

Unless a PFOD payment process is applied (see chapter 10) or the 'monthly report' already displays the 'global net' amount to be paid or received by a CSD participant, CSDs shall inform their participants of the actual amounts (debit or credit) of the penalties via a dedicated 'payment pre-advice' (using cash or settlement messages or proprietary communication means, whichever the CSD deems more appropriate).

Payment pre-advices for amounts to be paid or received shall be issued on the 15th PBD and latest prior to the 17th PBD; no payment confirmations are required to be issued once the payment has been executed.

For further details, see chapter 11.3.3.

11.1.3 Alternative reporting solutions

In addition to the above-mentioned messages, CSDs may develop User to Application (U2A) interfaces or alternative forms of penalties related to reporting for the benefit of their participants.

For U2A, formats other than XML (i.e. csv, xls, xlsx) might be used.

Baseline reporting solutions are however ISO15022 or ISO20022 messages, which represent the minimum and mandatory reporting to be offered by all CSDs to their participants.

11.2 GENERIC REPORTING CONTENT

11.2.1 Information blocks for penalty reporting

The corresponding SWIFT ISO messages described in chapter 11.1 refer to the content of relevant information fields.

However, in order to harmonise the interpretation of the relevant fields on a pan-European level, the intended hierarchy and content of those fields are described below.

The penalty reports will have a hierarchical structure wherein the level within the hierarchy will indicate:

- Level of aggregation;
- Reporting element.

These levels will, in technical terms, correspond to repetitive blocks within the reports, regardless of which ISO format is used.

This way, the high-level report will consist of repetitive blocks, each one representing an individual reporting segment/ level:

T - Technical level

This type of data is of a technical nature stating the specifics of a report. This sort of information - being metadata and being, therefore, mandatory for every produced report - falls not strictly within the hierarchical division of provided information.

A - Report issuer level (If the non-T2S CSD itself manages the calculation process, then this level becomes obsolete)

This level of information provided refers to high-level reports or master reports which are available to CSDs (either produced by themselves or by third parties as in the case of the T2s Penalty Mechanism).

B - Participant level

This level of reporting states information relating to a specific participant (be it a participant, CCP, Investor-CSD or other).

C - Counterparty/ Penalty level

At this level, a specific participant will be informed within the positions against specific counterparties about the actual penalties. This applies to daily reports, as well as monthly reports with the details at penalty and transaction level.

11.2.2 Mandatory fields

Mandatory fields ensure that the recipient of a penalty report will always be able to identify a failing settlement instruction subject to a penalty, i.e. even though he would have to use information from his internal sources. Mandatory fields have to comply with the mapping standards of the penalty reporting.

For example, a penalty report recipient would be informed about the amount of a penalty. In order to identify the settlement instruction, the recipient would need to know:

- Instruction/ transaction ID;
- Day for which the penalty was computed.

In order to understand the penalty, the recipient would need⁶¹:

- Security penalty rate and/ or the penalty Central Bank cash discount rate for the currency;
- SME Growth Market indicator (only for those settlement fails where the transaction was actually concluded on an SME Growth Market trading venue and the same SME Trading venue MIC code is used in the receiving and delivering settlement instruction);
- Liquidity indicator (for shares); and
- Number of securities to which the penalty applies (in case of partial settlements).

Thereby it is made sure that in a cross-CSD context, the receiving CSD will always be able to allocate the penalty correctly to its underlying participants.

Penalties and penalty aggregates in penalty reports will be always reported in the currency in which the penalty amounts were calculated, i.e. no conversion will take place except for the possible conversion during the calculation process (see chapters 6 and 7.4).

11.3 MESSAGE TYPES

There are several types of reporting on penalties throughout the month (see chapter 2):

1. Daily reporting of **new and/ or modified** penalties;
2. Monthly aggregated reporting of the penalties over the period;
3. Payment pre-advices via cash or settlement messages or proprietary communication means (pre-advices may not be issued when the CSD applies the PFOD payment process or the 'monthly report' already displays the 'global net' amount to be paid or received by a CSD participant).

11.3.1 Daily penalties report

Daily penalties are computed for and reported to the relevant **failing and non-failing party**. The CSD will hence report twice each penalty computed:

1. The one applicable to the failing party (i.e. party imposed with the penalty), and
2. The one applicable to the non-failing party (i.e. party entitled to receive the penalty).

The **failing party** and the **non-failing party** are the two counterparts instructing the settlement transaction and consequently the respective **owner of the involved securities account**.

It shall be noted that in case of a 'cross-CSD scenario' (see chapter 9), the CSD will consider the other involved CSD as the owner of the relevant securities account of the underlying settlement instruction.

⁶¹ Note that the 'reference price' as well as the price source used by the CSD for the penalty calculation for the failing instrument will not be displayed; the respective message field, if part of the report, may be blank or contain 'NONREF' or similar information.

Within the messages:

- The party will be a repetitive block in order to be able to include all the information in a single message. The CSD shall report cash penalties for a given party sorted by CSD (for cross-CSD fails), currency, and counterparty of the penalty (i.e. non-failing or failing party, respectively).
- Each penalty computed for a given business day and reported to the failing/ non-failing party and/ or its CSD shall include the information described in chapter 11.2.
- It is understood that an individual penalty contained in the report of a specific participant will have a mirror entry (debit vs. credit) in the penalty report of the relevant counterparty, i.e. will be on the participant level reported in two penalty reports.
- The daily reports contain only the amounts and information for a specific business day, i.e. they do not reflect exposures accrued in the course of several fail days.

Note that T2S and SWIFT confirmed on 26.03.2019 the availability of the information listed in these bullets in the foreseen ISO20022 semt.044 and ISO15022 MT537/ 548 messages.

11.3.2 Monthly aggregated report

On the 14th PBD of the following month, CSDs shall provide the monthly aggregated penalties report (see chapter 7).

This report shall include, per CSD, currency and party, the bilateral and ‘global’ (when applied by the CSD, see chapter 7.4.2) net amounts of the penalties against each of its counterparties, computed for all the business days of the previous month.

11.3.3 Payment pre-advices

In regard to the timeline of the collection and redistribution process, the payment pre-advice (if applicable) is to be issued by the CSD on the 15th PBD of the following month⁶².

Besides proprietary communication tools that a CSD may use to report the net amount to be paid/ redistributed, the following reporting options apply:

11.3.3.1 Cash messages

For the cash messages, the mandatory fields are:

- Cash Account number of the participant (including CSDs) to be debited or credited;
- Cash Account number of the CSD dedicated to the penalties management (if applicable);
- Amount to be paid (= debit amount)/ Amount to be received (= credit amount);
- Currency;
- Value date of relevant payment; and
- Free text (payment reference, reference to the penalty process, or other).

⁶² Note that payment pre-advice messages are not (e-)invoices. Therefore, they shall not contain the elements listed in Article 6 of EC Directive 2014/55/EU as not to be perceived as such.

As indicated, a payment pre-advice message will contain only one amount. That means that the CSD will send out to every participant payment pre-advice only in case there are payments to be processed and, for any of the two possible payment directions (debit and credit), there will be a dedicated pre-advice (i.e. a payment pre-advice message can contain only a credit or a debit amount, but not both).

11.3.3.2 Settlement messages

Various settlement messages can be used to report the net amount to be received/ paid, such as the following:

- Settlement instructions;
- Statement of transactions;
- Status advice etc.

Settlement messages will be sent for both, the debit and credit amounts.

The Settlement message may contain one or several amounts depending on the type of message to be used (i.e. a statement may contain several amounts).

12 MISCELLANEOUS

12.1 PENALTIES ACTIVATION PROCESS

Cash penalties will only be applied as from the business day where the penalty mechanism is implemented, i.e. there will be no late matching fail penalties applied for business days before the implementation date. Penalties should be computed considering the fails that occur on or after the activation date of the Penalty Mechanism.

ECSDA CSDs agreed that the activation date for applying CSDR compliant penalties shall be aligned with the one of T2S, i.e. penalties shall start to be applied as of settlement (fail) date **01st February 2022**. If CSDs decide to calculate and report penalties prior to this date ('dry run test'), they must not collect/ re-distribute any penalties calculated for fails with an ISD prior to **01st February 2022**.

SEFPs (Settlement Fail Penalties) will be computed **for instructions that fail to settle** on or after the activation date.

LMFPs (Late Matching Fail Penalties) will be computed **for instructions matched** on or after the activation date.

Main principles:

- No SEFP or LMFP applies for a business day prior to the activation date.
- In case an instruction with ISD prior to the activation date is matched in the settlement system on or after the activation date, the CSD will compute a LMFP. Nevertheless, in the computation of this LMFP, the CSD will not consider the business days prior to the activation date.

Note: 'aged instructions' will be relevant for the cash penalties mechanisms as from the activation date (i.e. **01st February 2022**) as penalties will be applied as of this activation date, independent if the intended settlement day is prior to the activation date.

See Annex V for examples.

12.2 CONTINGENCY AND EXCEPTIONS HANDLING

12.2.1 Delayed delivery of CSD reports

In case a CSD cannot deliver a scheduled report on time (see chapter 2), it shall inform its participants as soon as possible about this temporary operational disruption via the standard CSD customer communication means (the same applies in case of delayed payment processing).

12.2.2 Exceptional situations where the cash penalties should not be applied

In addition to situations where insolvency proceedings are opened against the failing participant, cash penalties should not be applied in the following situations where settlement cannot be performed for reasons that are independent from the involved participants:

- i. ISIN suspension from settlement due to an 'undue creation/ deletion of securities' reconciliation break;

- ii. ISIN suspension from trading⁶³;
- iii. Settlement instructions involving cash settlement outside the securities settlement system operated by the CSD if, on the respective day, the relevant payment system is closed for settlement;
- iv. Technical impossibilities at the CSD level that prevent settlement, such as: a failure of the infrastructure components, a cyber-attack, network problems.

Note: in all or some occasions, penalties may continue to be calculated and reported by the CSD but removed afterwards. Also note that suspension of an ISIN from settlement does not impact the principle eligibility of the ISIN for SDR penalties application, hence, penalties will continue to be calculated and reported by the CSD(s) and removed afterwards.

CSDs should exchange information in case e.g. an Investor-CSD suspends an ISIN from settlement as such suspension may require consideration in the penalties application process. The cross-CSD information exchange process will be detailed at a later stage.

Furthermore, CSDs should report the concrete cases falling in the above-mentioned categories to their competent authorities who may ask the CSDs to apply cash penalties in the future in similar cases if they consider the non-application of penalties unjustified.

12.2.2.1 Special case: CSD participants suspension (ECSDA discussion ongoing)

CSD participants may be (temporarily or completely) suspended from the settlement of its transactions for different reasons.

The reasons may have an impact on whether penalties will (continue to) be applied or not:

- Suspension of ‘systematically failing participants’ according to CSDR: CSDs will continue to calculate penalties and consider them for the monthly payments.
- Other reasons for suspension (e.g. sanctions due to money laundering, court order or similar): this is under discussion within ECSDA.

The above assumptions as well as the concrete approaches and processes are currently discussed within ECSDA.

12.2.3 CSD participant insolvency

CSDs should exchange information in case a CSD participant becomes insolvent, leading to the inability of the CSDs to (fully) collect the penalties due and act according to ESMA Q&As as updated on 02.10.2019 as follows:

⁶³ While this is stated in the ESMA Q&As, ESMA advised ECSDA this is not meant to be mandatory but a non-exhaustive example for cases when CSD may not need to apply penalties. In this specific case, CSDs are usually not aware of the suspension taking place at trading level, hence, will not waive any penalties that were calculated.

‘As of the date of the opening of insolvency proceedings against a participant, Article 7(12) of CSDR applies and, therefore, Article 7(2) shall cease to apply to the settlement fails caused by the insolvent participant and consequently:

- i. Cash penalties should no longer be calculated in respect of settlement fails caused by the insolvent participant;*
- ii. Cash penalties calculated in respect of settlement instructions involving the insolvent participant until that date should be managed separately i.e. not be included in the aggregated net amounts referred to in Article 17 of the RTS on Settlement Discipline; and*
- iii. Cash penalties should not apply to settlement instructions relating to the liquidation of positions of an insolvent participant.’*

Hence, penalties caused by non-insolvent participants need to continue to be calculated and collected by the CSD.

ECSDA analysis is ongoing; the penalties processing will be detailed at a later stage.

As a side note, it should also be considered that cash accounts closures (for reasons including or other than insolvency, on the level of a cash correspondent, central bank or other payment service provider) may occur independent from the settlement/ penalties process. Hence, CSD participants shall ensure the penalties payments are made on time even in such situations.

12.2.4 CSD participant late or non-payment (excluding insolvency) (this section includes ECSDA latest assumptions; more details will be provided at a later stage.)

Generally, the CSD participants shall pay their dues according to the Framework chapter 10.2 latest by the start of the 17th PBD of the payment month in order to avoid such contingency actions by CSDs.

However, exceptionally, should that not be complied with by one or more CSD participant(s), CSDs will have to trigger actions to secure the payment process can be finished in the same month in line with ESMA requirements. For this purpose, the same processes and measures as for a participant insolvency handling may be applied by CSDs (see Framework chapter 12.2.3).

12.3 CCP-RELATED ASPECTS

12.3.1 Main principles to be applied as agreed between EACH and ECSDA

ESMA SDR RTS Article 17 defines the general requirements for CSDs to collect and distribute penalties amongst its participants.

However, ESMA SDR RTS Article 19 defines a specific exception in relation to the actual collection and re-distribution of penalties where the failing or receiving ‘*participant is a CCP*’ to failing cleared transactions: ESMA SDR RTS Article 19 stipulates that CSDs shall calculate and report penalties for such transactions but not actually charge/ credit the calculated penalties as this shall be done by the CCPs towards its clearing members.

As a result, the relevant penalty amounts will be excluded from the CSD’s monthly payment processing. CCPs will be collecting and redistributing the cash penalties that are provided in the reports from the CSDs.

Whilst EACH and ECSDA commonly agree that the exception defined in Article 19 is not required, discussions with ESMA and the EU Commission (who are generally supportive of this view) have not yet resulted in the formal clarification of the legal conditions allowing for the application of Article 17 instead (i.e. to manage cleared and uncleared transactions in the same way). Therefore, as agreed with EACH, this Framework section focuses on the application of Article 19 by CSDs and CCPs.

CCPs may apply one of the following access models to CSDs:

1. CCP is a CSD participant by directly holding an account (in the CCP’s name) in the CSD’s books, operated by the CCP itself or using the services of an agent to act as the account operator of the CCP; or
2. CCP using the services of a settlement agent being the direct CSD participant (i.e. the account is in the name of the agent, with or without mentioning the CCP’s name and segregating or not the settlement transactions of the CCP with other clients’ business served by the agent).

In context of applying Article 19, only scenario 1 above shall be considered.

Depending on the CCP netting model, CCPs may regularly cancel their failing instructions before or after the last settlement cycle has finished. Such cancellations by a CCP shall not affect the obligation for the calculation of the penalty by the CSD and, subsequently, the CCPs’ penalties processing towards its clearing members, i.e. such (cancelled) failed instructions shall still be considered by CSDs for penalties calculation and reporting to the settlement parties.

Note that the EACH ‘CCP Framework Settlement Discipline’ provides further information about CCP-related settlement discipline aspects (<https://www.eachccp.eu/newspublications>).

12.3.2 Transactions scope

In order to apply Article 19, CSDs will need to identify the transactions which meet the necessary conditions (i.e. cleared transactions), i.e. it only applies:

1. to participants that are CCPs; and
2. to cleared transactions.

As such, CCPs will need to differentiate their cleared transactions (receipts from clearing members, to be delivered to clearing members) from their non-cleared transactions (e.g. margin and investment transactions). CSDs provide the possibility to CCPs to segregate their cleared and uncleared transactions using different securities accounts or SWIFT BIC codes. This identification is mandatory for CSDs to be able to limit the application of Article 19 to cleared transactions only⁶⁴.

12.3.3 T2S settlement fails

The T2S penalty mechanism will identify cleared transactions by the 'account owner' BIC code and flag the relevant penalties accordingly in the T2S reporting to CSDs and DCPs.

The current approach to use the BICs on the existing table (TABLE 121 - CCP TRANSFORMATION EXCEPTIONS used for the management of corporate actions on flows after the maturity date) shall be changed to apply a 'CCPs penalties BIC list' instead; a Fasttrack CR is under discussion on T2S level as agreed with EACH and ECSDA in November 2020.

CCPs must ensure they segregate their client from their proprietary activity per BIC code. I.e. CCP transactions that are not related to the direct settlement of the CCPs' clearing member transactions must refer to a BIC that is not contained in the relevant T2S' CCPs penalties BIC list'.

CCPs shall inform their CSD(s) in case a BIC code shall be added or removed from the list that will be maintained by T2S.

12.3.4 Non-T2S settlement fails

CSDs provide the possibility to CCPs to segregate their cleared and uncleared transactions via different securities accounts or BIC codes. Each CSD will make known to CCPs the option it will provide.

This may require a CCP to use a segregated account at the CSD for its cleared transactions and allow the subsequent flagging by the CSD at the CCP's account level.

CCPs shall inform their CSD of accounts that should be identified as used for cleared transactions in scope of Article 19.

⁶⁴ CSDR requests this information to be provided by the CSD participants when applicable; in case the information is not provided for a CCP-cleared instruction, penalties will be charged by the CSD.

If applicable, other approaches to identify CCP transactions by CSDs will be communicated to CCPs by the relevant CSDs.

12.3.5 Penalties calculation and reporting on cleared transactions by the CSDs

As per ESMA SDR RTS Article 19, CSDs shall ensure that CCPs are provided with the penalty detection, calculation and reporting but will not themselves collect or re-distribute the penalties.

Therefore:

- CSDs will include the CCP cleared transactions when they:

- perform their daily fails detection and penalties calculation process;
- report the gross and bilateral net amounts penalties in their daily reporting (CCP-transaction will be flagged as 'not computable');
- report the monthly bilateral penalties net amounts in their monthly reporting to be provided on the 14th PBD (CCP-related amounts will be flagged as 'not computable').

Note: the same penalty calculation rules and reporting channels/ formats as for the non-CCP cleared transactions apply. All reports are provided at CSD participant level, i.e. amounts will not be provided at 'party 2' level (i.e. at the level of the client of the CSD participant, thus no reporting will be provided at the level of the clearing members of the CCPs).

- CSDs will not include the CCP cleared transactions when they:

- report the global penalties net amounts in their monthly reporting that is providing the monthly amounts to be paid or to be received by the CSD participants, if applicable;
 - at the discretion of the CSD, this reporting may either be sent on the 14th PBD (in the same monthly reporting as the monthly bilateral net amounts) or in a dedicated reporting (on the 14th or 15th PBD).
- create the PFODs on the 15th PBD or (if applicable) the cash transfers for penalties payment;
- perform the penalties collection and distribution payment process (actual credit or debit payments execution) on the 17th PBD.

12.3.5.1 Appeal process

CCPs envisage that the CSD account holder will reconcile their penalties using the daily reports received from the CSD covering all penalties, including CCP cleared transactions.

The CCP will be directing its members to go through the CSD account holder, be that their settlement agent or themselves (depending on their account set up), in the rare scenario that an appeal against a fails penalty alleged to them should be raised.

CCPs will also complete reconciliations versus the penalties received in the CSD's reports and will also have recourse to appeal the CSDs as any other participant (the assumption is that the majority of appeals will come from the CSD account holders and not the CCPs directly).

12.3.6 Penalties collection & re-distribution on cleared transactions by CCPs

The collection & re-distribution process of the penalties on cleared transactions is outside the remit of the CSDs. These penalties will be managed by the CCPs with their clearing members.

12.3.6.1 Reporting from the CCPs to the CSDs on the collection & re-distribution of the penalties on cleared transactions

OPEN ITEM (ECSDA/ EACH discussion ongoing): According to CSDR RTS Art. 19 (d), CCPs shall report to CSDs the amounts they collected and distributed on a monthly basis. EACH and ECSDA agreed to define a template text that shall be used by CCPs to confirm (via Email, website upload/ entry or other means defined by the CSD) the actual payment execution to the CSDs on a monthly basis.

Message template text:

'Subject: CCPXXXXXX confirmation to CSDYYYYYY of penalties collected and distributed

Following the obligations established in Article 19 of the Commission Delegated Regulation (EU) 2018/1229, and in particular the obligation established in Article 19 (d), we kindly confirm that all penalties submitted by CSDYYYYYY to CCPXXXXXX amounting to XXXXX and corresponding to the month of XXXXXX have been duly collected and distributed to the relevant clearing members of CCPXXXXXXX.'

ANNEX IV - LIST OF CSDs USING THE FRAMEWORK AS MARKET PRACTICE

[To be filled in at a later stage]

ANNEX V – PENALTIES ACTIVATION PROCESS EXAMPLES (SEE FRAMEWORK CHAPTER 12.1)

Note: the examples are still based on the initial assumption that the activation date was Monday 23 November 2020 instead of 01 February 2022.

Example 1

- A DVP settlement instruction enters and is matched in the settlement system at 10:00 on its ISD (Friday 20 November 2020):
 - The CSD will not compute the SEFP if the instruction fails to settle on Friday, 20 November 2020 because it is before the activation date.
- However, if the instruction fails to settle again in the settlement system on Monday, 23 November 2020 ('ISD+1' for the instruction), then the CSD will compute a SEFP:
 - This SEFP is computed because Monday, 23 November is the day of activation of the Mechanism. The SEFP will be computed and reported together with all penalties for Monday, 23 November 2020, i.e. on the daily reporting.

Example 2

- A DVP settlement instruction enters and is matched in the settlement system at 14:00 on Friday, 20 November 2020. The instruction has ISD Thursday, 19 November 2020 (i.e. enters and is matched in the settlement system one day after its ISD):
 - The CSD will not compute a LMFP for this instruction because the matching date (Friday, 20 November 2020) is before the activation date.
- If (on top of arriving one day late) the instruction also fails to settle in the settlement system on Friday 20 November 2020 (i.e. on 'ISD+1' for the instruction):
 - The CSD will not compute the SEFP because the instruction fails to settle in the settlement system on Friday, 20 November 2020, which is before the activation date of the Mechanism.
- If the instruction fails again to settle in the settlement system on Monday, 23 November 2020 ('ISD+2' for the instruction), then the CSD will compute a SEFP:
 - This SEFP will be computed because Monday, 23 November is the day of activation of the Mechanism. The SEFP will be computed and reported together with all penalties for Monday, 23 November 2020, i.e. on the daily reporting.

Example 3

- A DVP settlement instruction enters and is matched in the settlement system at 14:00 on its ISD Monday, 23 November 2020:
 - The CSD will compute the SEFP if the instruction fails to settle on Monday, 23 November 2020, because it is the activation date.

The SEFP will be computed and reported together with all penalties for Monday, 23 November 2020, i.e. on the daily reporting.

- If the instruction fails again to settle in the settlement system on any following day, the CSD will compute related SEFPs.

Example 4

- A DVP settlement instruction enters and is matched in the settlement system at 14:00 on Monday, 23 November 2020. The instruction has ISD Friday, 20 November 2020 (i.e. enters and is matched in the settlement system one day after its ISD):
 - The CSD will compute a LMFP for this instruction because the matching date (Monday, 23 November 2020) is the activation date.

In the computation of this LMFP, the CSD will not consider the days prior to the activation date because the securities subject to penalties will have valid from equal to Monday, 23 November 2020. Therefore, in this example, the CSD will consider that there is no applicable business day for this LMFP.

- If (on top of arriving one day late) the instruction also fails to settle in the settlement system on Monday, 23 November 2020 ('ISD+1' for the instruction):
 - The CSD will compute the SEFP because the instruction fails to settle in the settlement system on Monday, 23 November 2020, which is the activation date of the Mechanism. The SEFP will be reported on Tuesday 24 November 2020.

Example 5

- A DVP settlement instruction, enters and is matched in the settlement system at 14:00 on Tuesday, 24 November 2020. The instruction has ISD Friday, 20 November 2020 (i.e. enters and is matched in the settlement system two business days after its ISD):
 - The CSD will compute a LMFP for this instruction:

In the computation of this LMFP, the CSD will not consider the days prior to the activation date because the securities subject to penalties will have valid from equal to Monday, 23 November 2020. Therefore, in this example, the CSD will consider only one business day for the LMFP (i.e. the LMFP will apply just for Monday, 23 November 2020).

The LMFP will be computed and reported on the daily reporting.

- If (on top of arriving two days late) the instruction also fails to settle in the settlement system on Tuesday, 24 November 2020 ('ISD+2' for the instruction):
 - The CSD will compute a SEFP because Tuesday, 24 November 2020 is after the activation date of the mechanism. This additional penalty will be reported on Wednesday 25 November 2020.
